

**INDUSTRIES**

- All industries

**APPLICATIONS**

- Power routing
- Data communications

**PLATFORMS**

- Self-contained

**CONNECTIVITY**

- N/A

Product Description:

Panduit's PAN-WAY™ raceway products are industry leading solutions for protecting and managing both power and communications cabling including fiber optic cabling. Smaller latching raceway is frequently used as a time-saving alternative to metal conduit for power and communication drops to computers on the plant floor. Larger multi-channel raceway is often used for managing both power and data communication cables along a masonry wall or other surface for drops to multiple computers, printers or other peripherals. Panduit supplies one of the industries largest variety of outlets and surface mount boxes to work with its PAN-WAY system, all of which are compatible with the PAN-COM™ line of connectorization products.

The PANDUCT™ line of solid and slotted wiring duct is so familiar to the electrical industry that it is frequently referred to simply as "Panduit". However, many people are unaware of the multiple uses for PANDUCT outside of an electrical enclosure. Innovative customers have used PANDUCT just about everywhere to manage their cabling including especially the back or underside of work benches.

CATALOG NO.	DESCRIPTION
SA101N152E-OP	LDP10 - Power or data rated raceway - small capacity
	LD2P10 - Multi-channel raceway for power and data - small capacity
	T70 - Multi-channel raceway that accepts all standard faceplates - medium capacity
	Twin70 - Multi-channel raceway with completely separate data and power channels - large capacity, accepts all standard faceplates
	Type T - Multi-channel raceway - large capacity, standard fittings

Features:

- Non metallic construction
- Full Compliment of 1" bend radius fittings that prevent cables from over bends
- UL 5A Listed to 600V
- Tamper Resistant
- High Impact Resistance
