

– Important Information – about Bulletin 1326 Cables

To guard against conductor twisting, Bulletin 1326 cables that are to be used in a track should be hung for 24 hours prior to use. For long cables where hanging is impractical, the cables should be laid straight out on the floor. The above procedures allow the conductors to relax into their normal state.

Publication 1326A-5.14 – January, 1991
