- All industries

**APPLICATIONS**

- N/A

**PLATFORMS**

- Win95/NT

**CONNECTIVITY**

- RS232/422/485
- Ethernet
- RSLinx

Product Description:

In a native 32-bit Windows NT environment, Real World Technology's OnTrack® Manufacturing Execution System integrates with Allen Bradley controls and Rockwell Software's RS family of products (RS View, RS Tools, RS Linx, etc.) to help companies improve their manufacturing profitability. Real-time connectivity to Rockwell products on the factory floor provides accurate and instantaneous information enabling better decisions and increased manufacturing profitability.

OnTrack is a suite of software modules that schedules, dispatches, tracks, monitors, and controls information on the floor, simultaneously allowing real-time performance measurement through the Manufacturing Profitability Index™. Based on Microsoft BackOffice components, OnTrack tells your customer "What is happening right now!" and identifies opportunities for continuous improvement.

Features

- Provides standard support for OLE/DCOM automation services including ActiveX controls
- ODBC interface compliments our solution allowing easy integration to existing legacy applications (ERP, CAD/CAM, etc.) control systems and other RS products.
- OnTrack's three tier client/server architecture employs a Visual Basic client, C++ object services and industry standard relationship database support.
