

# ProcessLogix R500.1 Installation and Upgrade Guide Update

## Important Information

Please make the following changes to the ProcessLogix R500.1 Installation and Upgrade Guide, Chapter 11, Performance and Capacity Specifications, Page 11-21. One 1756-DNB, DeviceNet Interface Module counts as 2 I/O units.

## I/O Performance and Capacity Specifications

Every I/O device presents a load on the 1757-PLX52 system performance by utilizing I/O network bandwidth and 1757-PLX52 memory and CPU resources.

Many of these constraints are measured in I/O Units, which is a generic loading definition used to normalize the load among the many different I/O devices and families supported.

Refer to Table 11.R I/O Unit Load Constraints on page 11-21 for the I/O unit load assigned to various devices and modules. By following these configuration constraints, you can prevent the 1757-PLX52 from being overloaded and increase the ability for the 1757-PLX52 to operate correctly.

**Table 11.R I/O Unit Load Constraints**

<b>I/O Device or Module</b>	<b>I/O Units</b>
1 1756/1757 chassis mounted I/O Module	1
1 1794 FLEX I/O or 1797 FLEX EX rail mounted I/O Module	1
1 1757-SIM FTA	4
1 1788-CN2FF, Foundation Fieldbus Linking Device	1

**Table 11.R I/O Unit Load Constraints**

<b>I/O Device or Module</b>	<b>I/O Units</b>
1 1757-FIM, Fieldbus Interface Module	3
1 DHRIO Module	1
1 SST-PFB-CLX Profibus Module	2 (for 64 Unit/CPM Limit) 6 (for 24 Unit/CNB Limit)
1 1756-DNB, DeviceNet Interface Module	2
