

ControlNet-to-DeviceNet Linking Device

(Catalog No. 1788-CN2DN, Release 1.014)

How to Use These Notes

These release notes describe changes in release 1.014 of the ControlNet-to-DeviceNet Linking Device, catalog number 1788-CN2DN.

Use these notes along with your ControlNet-to-DeviceNet Linking Device User Manual, publication 1788-5.2B, October 1999.

1788-CN2DN Requires RSNetWorx

The 1788-CN2DN requires RSNetWorx to configure the ControlNet network to which the CN2DN is attached.

Use with ControlLogix 5550 Processors

When the 1788-CN2DN is controlled by a ControlLogix 5550 processor, you must use RSLogix 5000 software, version 2.25 or later, to program the ControlLogix 5550. Also, you must use RSNetworx for ControlNet, version 1.8 or later, to configure the ControlNet network.

Use with PLC-5/C Controllers

When the 1788-CN2DN is controlled by a PLC-5/C, you must use RSNetWorx for ControlNet Version 2.00 or later.

New to Version 1.014

- A “Build Identification Number” has been added to the Product Name String of the CN2DN module. Applications such as RSLinx and RSNetworx will display this added information. The number will take the form of the letter “Q” along with a numeric value. It is used for internal quality auditing purposes and does not in any way affect the functionality of the product.

Corrected Anomalies

The following anomalies have been corrected in this release of the 1788-CN2DN (version 1.014):

- If a DeviceNet node was using fragmented I/O messages and did not finish its response before the DeviceNet scanner started another scan cycle, the output data from the controller was being mapped to the controller's input data table.
