

PowerFlex 700S Drive and DriveLogix Controller

Important: The PowerFlex 700S drive and DriveLogix controller contain flash upgradable firmware. These products ship with the latest revision available at the time of manufacturing.

Determining Firmware Revision Level

To determine the firmware version for a PowerFlex 700S drive, view parameters 314 [VPL Firmware Rev] and 315 [VPL Build Number]. The firmware version is the combination of the data in these parameters.

Example:

To determine the firmware revision level for a DriveLogix controller, use RSNetWorx or RSLinx software to view the properties of the node occupied by the controller.

Finding Information About Specific Firmware Revisions

Allen-Bradley publishes a Firmware Release Note for every revision of firmware. Each note explains the difference between the new revision and previous revision of firmware.

The CD, which accompanies the drive, contains all the Firmware Release Notes which are complete at the time of CD mastering. However, the CD revision is not lock stepped with the firmware of the drive or controller. If the Firmware Release Note for the drive or controller firmware is not on the CD, consult one of the following web sites:
