Warnings, Cautions, and Notes
as Used in this Publication

**Warning**

Warning notices are used in this publication to emphasize that hazardous voltages, currents, temperatures, or other conditions that could cause personal injury exist in this equipment or may be associated with its use.

In situations where inattention could cause either personal injury or damage to equipment, a Warning notice is used.

**Caution**

Caution notices are used where equipment might be damaged if care is not taken.

**Note**

Notes merely call attention to information that is especially significant to understanding and operating the equipment.

This document is based on information available at the time of its publication. While efforts have been made to be accurate, the information contained herein does not purport to cover all details or variations in hardware or software, nor to provide for every possible contingency in connection with installation, operation, or maintenance. Features may be described herein which are not present in all hardware and software systems. GE Fanuc Automation assumes no obligation of notice to holders of this document with respect to changes subsequently made.

GE Fanuc Automation makes no representation or warranty, expressed, implied, or statutory with respect to, and assumes no responsibility for the accuracy, completeness, sufficiency, or usefulness of the information contained herein. No warranties of merchantability or fitness for purpose shall apply.

This manual includes safety precautions for protecting the user and preventing damage to the machine. Precautions are classified into Warnings and Cautions according to their bearing on safety. Also, supplementary information is described as Notes. Read the Warnings, Cautions, and Notes thoroughly before attempting to use the machine.

**WARNING**

Applied when there is a danger of the user being injured or when there is a danger of both the user being injured and the equipment being damaged if the approved procedure is not observed.

**CAUTION**

Applied when there is a danger of the equipment being damaged, if the approved procedure is not observed.

**NOTE**

Notes is used to indicate supplementary information other than Warnings and Cautions.

- Read this manual carefully, and store it in a safe place.
GENERAL WARNINGS AND CAUTIONS

The following warnings and note describe precautions on handling CNCs, which must be observed to ensure safety when using machines equipped with a CNC.

WARNING

1 Before operating the machine, thoroughly check the entered data. Operating the machine with incorrectly specified data may result in the machine behaving unexpectedly, possibly causing damage to the workpiece and/or machine itself, or injury to the user.

2 The parameters for the CNC and PMC are factory-set. Usually, there is no need to change them. When, however, there is no alternative other than to change a parameter, ensure that you fully Failure to set a parameter correctly may result in the machine behaving unexpectedly, possibly causing damage to the workpiece and/or machine itself, or injury to the user.

NOTE

Command programs, parameters, and variables are stored in nonvolatile memory in the CNC. Generally, the contents of memory are not lost by a power on/off operation. However, the contents of memory may be erased by mistake, or important data in nonvolatile memory may have to be erased upon recovering from a failure. To enable the restoration of data as soon as possible if such a situation arises, always make a backup of the data in advance.
WARNINGS AND NOTES RELATING TO LADDER EDITING PACKAGE (WINDOWS)

Warnings and notes relating to Ladder Editing Package (Windows) appear in this manual. Before using the software, read this manual thoroughly and take time to read the Warnings, Cautions, and Notes in this manual carefully. In addition, "READ THE FOLLOWING:" which appears in the next section, summarizes the note to be kept in mind when Ladder Editing Package (Windows) is used, which is not described in the chapters in this manual. Before using this software, also read this part.
READ THE FOLLOWING:…

The following summarizes the points that the user should keep in mind when using Ladder Editing Package (Windows). Before using Ladder Editing Package (Windows), read the following:

**CAUTION**

In this manual we have tried as much as possible to describe all the various matters. However, we cannot describe all the matters which must not be done, or which cannot be done, because there are so many possibilities. Therefore, matters which are not especially described as possible in this manual should be regarded as “impossible”
Thank you for purchasing Ladder Editing Package (Windows) (Specification: A08B-9210-J511).

Ladder Editing Package (Windows) is a programming system for developing sequence programs for FANUC PMCs.

This software runs on a FANUC open-ended CNC.

Use the sequence program development software listed below to develop sequence programs, using a personal computer that operates independently of a FANUC open-ended CNC. For how to use the software, refer to the respective operator's manuals.

</table>

This software runs under the Microsoft® Windows® environment. This manual does not cover common basic Windows operations. If you are a beginner to Windows, read the Windows manual first to learn the basic Windows operations.

This manual describes the programming system-specific items including the methods of installing, starting, and using this software. For details on how to create sequence programs for FANUC PMCs and how to operate PMCs, refer to the following manuals:

Read this manual thoroughly to ensure the correct use of Ladder Editing Package (Windows).

**NOTE**

After purchasing this software, you can copy it for use at your factory as needed. Attach a copy to a machine to be shipped as a backup. FANUC owns the copyright of the software. No one is allowed to redistribute it, in part or in whole, to any third party with an aim to use it for application development.

Microsoft and Windows are registered trademarks of Microsoft Corporation in the United States of America.
FEATURES OF LADDER EDITING PACKAGE (WINDOWS)

This software has the following features:

**Features**

Using the FANUC PMC sequence program development environment on an open-ended CNC offers a more comfortable manipulation environment.

**NOTE**

The specifications of the online function vary from one PMC model to another. The online function may not be able to be used on some models. For details on the functions, refer to the relevant PMC programming manual.
• **Main functions**
  - Inputting, displaying, editing, and outputting sequence programs
  - Monitoring and debugging sequence programs
    (Displaying the signal status, alarms, and PMC status, and
    ladder diagram online monitoring)
  - Setting and displaying PMC parameters
  - Executing and stopping sequence programs
  - Transfer to and from the PMC (RAM)
  - Writing to flash ROM
  - Printing sequence programs

• **Supported PMC models**

• **PMC models and supported functions**
  The following table lists the available functions for each PMC model:

</table>

A: Available  B: Not available  C: Available under certain conditions (The supported functions vary depending on the CNC and PMC series and edition. Refer to the PMC programming manual.)
System configurations with open-ended CNC

The configurations of systems with an open-ended CNC are summarized below.

1. System in which the CNC incorporates a personal computer board (MMC-IV)

   ![Diagram](image)

   - Manipulating the CRT/MDI
     If the system is used with a CRT/MDI, the full keyboard keys that are not initially available on the CRT/MDI keypad are assigned as listed below. For details, refer to the FANUC MMC-IV Operator’s Manual (B-62494E).

   **Key correspondence table**

<table>
<thead>
<tr>
<th>Full keyboard</th>
<th>CRT/MDI</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ctrl</td>
<td>Custom</td>
</tr>
<tr>
<td>Tab</td>
<td>System</td>
</tr>
<tr>
<td>Alt</td>
<td>Alter</td>
</tr>
<tr>
<td>Back Space</td>
<td>Can</td>
</tr>
<tr>
<td>Esc</td>
<td>HELP</td>
</tr>
</tbody>
</table>

   - Program backup copy storage
     PMC flash memory

   **NOTE**
   The CRT/MDI keypad cannot be used to activate a Japanese-language entry system. To enter comments in Japanese, use the full keyboard.

2. System in which a CNC is connected to a commercial personal computer via a high-speed serial bus

   ![Diagram](image)
3. System in which more than one CNC is connected to a commercial personal computer via a high-speed serial bus

![Diagram of HSSB multiconnection]

The configuration of the connection shown above is called an HSSB multiconnection. Inserting more than one HSSB board into personal computer slots enables the personal computer to be connected to more than one CNC. With this configuration, up to eight CNCs can be connected to one personal computer.

• Program backup copy storage
  PMC flash memory

4. System in which a CNC is connected to a FANUC intelligent terminal via a high-speed serial bus

![Diagram of CNC connection]

• Manipulating the CRT/MDI
  See "1.System in which the CNC incorporates a personal computer board (MMC-IV)"

• Program backup copy storage
  PMC flash memory
CHECKING THE PACKAGE CONTENTS

The package contains the following:

- Floppy disks
  FANUC Ladder Editing Package (Windows) (A08B-9210-J511#ZZ07)

NOTE
You must read the release note (READMEJ.TXT) on the first floppy disk of the product package. The release note provides detailed information on the package and information not included in the operator’s manual.
ORGANIZATION OF THIS MANUAL

This manual is organized as follows:

SAFETY PRECAUTIONS
Describes general precautions that must be observed to ensure the safe use of this software.

PREFACE
Briefly describes the main features of this software. Also describes how to use this manual and other information to understand the use of this software.

1. SETUP
Describes the software operating environment and explains how to set up this software to ready it for use.

2. BASICS
Describes the basic items that the user should understand before using this software.

3. CREATING AND EDITING SEQUENCE PROGRAMS
Describes how to create and edit sequence programs.

4. PRINTING SEQUENCE PROGRAMS
Describes how to print sequence programs.

5. COMPILATION AND DECOMPILATION
Describes how to compile and decompile programs and also describes ladder program protection by password.

6. MNEMONIC EDITING
Describes conversion to mnemonic files and the mnemonic file format.

7. INPUT/OUTPUT
Describes input/output of sequence programs (loading sequence programs from the PMC and storing them into the PMC).

8. EXECUTING AND STOPPING SEQUENCE PROGRAMS
Describes how to execute and stop sequence programs.

9. DIAGNOSIS
Describes the online diagnosis functions including ladder monitoring, signal tracing, and signal analysis.

10. CONVERTING SEQUENCE PROGRAMS
Describes how to convert DOS sequence programs to Windows sequence programs.

11. ERROR MESSAGES
Describes the error messages displayed by this software.

APPENDIX
Provides information that is to be read as necessary.
NOTATION CONVENTIONS IN THIS MANUAL

This manual uses the following notation and conventions:

• Menus, commands, and screens

<table>
<thead>
<tr>
<th>Notation example</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>[File] menu</td>
<td>Menu names appear in brackets ([ ]).</td>
</tr>
<tr>
<td>[Setting…]</td>
<td>Command names appear in brackets ([ ]).</td>
</tr>
<tr>
<td>[Program List] screen</td>
<td>As the name of a screen, the title displayed on the title bar of the screen appears in brackets ([ ]).</td>
</tr>
<tr>
<td>&lt;OK&gt; button</td>
<td>Command buttons on the screen appear in angle brackets (&lt;&gt;).</td>
</tr>
</tbody>
</table>

• Keys and their operation

<table>
<thead>
<tr>
<th>Notation example</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Enter] key</td>
<td>Key names are indicated in brackets ([ ]).</td>
</tr>
<tr>
<td>[Ctrl] + [Tab] key</td>
<td>When two or more keys are held down at the same time by pressing them sequentially, the keys are connected using “+”, as shown on the left.</td>
</tr>
<tr>
<td>Direction keys</td>
<td>The [→], [←], [↑], and [↓] keys are collectively called direction keys.</td>
</tr>
</tbody>
</table>

• Mouse operations

<table>
<thead>
<tr>
<th>Example of notation</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Click</td>
<td>To press and then immediately release a mouse button.</td>
</tr>
<tr>
<td>Double-click</td>
<td>To click a mouse button twice in rapid succession.</td>
</tr>
<tr>
<td>Drag</td>
<td>To move the mouse while holding down a mouse button, and then releasing the button at a desired position.</td>
</tr>
</tbody>
</table>

• Folders

Directories and folders are collectively referred to as folders.
• PMC models
   
   In this manual, the PMC models are abbreviated as follows:

   **PMC Model Abbreviations**

<table>
<thead>
<tr>
<th>Abbreviation</th>

## APPENDIX

### A CABLE FOR DATA TRANSFER

### B CONVERSION USING A SIGNAL ADDRESS CONVERTER
1 SETUP

This chapter describes the operating environment of Ladder Editing Package (Windows). This chapter also describes how to set up Ladder Editing Package (Windows) to make software ready for use.
1.1 OPERATING ENVIRONMENT

The operating environment required for this software is as follows:

- **Computer**
  PC/AT-compatible computer running Windows 95, 98, NT4.0, or 2000

- **CPU**
  Pentium 133 MHz or better

- **Memory**
  For Windows 95 and Windows 98
  - 16MB or more (32MB or more recommended)
  
  For Windows NT 4.0
  - 24M or more (32MB or more recommended)
  
  For Windows 2000
  - 32MB or more (64MB or more recommended)

- **Hard disk**
  20MB of free space required (at installation)
  100MB of free space required (at execution)

---

**NOTE**

Time required for ladder diagram editing and processing of symbols and net comments is affected by the free spaces of memory and the hard disk. When handling a source program including many ladders, symbols, comments, or net comments or editing ladder diagrams on multiple screens, allocate much more free spaces as far as possible.
• Device driver
  Expansion driver/library disk (for Windows, A02B-0207-K726)
  or driver/library disk (for Windows, A02B-0207-K727 and for
  Windows 95, A02B-0207-K730)

**NOTE**
A device driver combination that matches the configuration of your open-ended CNC system is necessary.
For an HSSB multiconnection, use a driver/library disk for Windows 95. The HSSB multiconnection runs only on the Windows 95 DOS prompt; it does not run on MS-DOS.
Refer to the document file saved on your driver/library disks for explanations about how to incorporate the HSSB board and to set up nodes.

• CNC functions
  Options for FANUC open-ended CNCs

  <For Series 150/Series 150i/>
  - Expansion driver library function (A02B-0207-J801)
  - Ladder editing package function (A02B-0207-J821)

  <For Series 160/Series 180/Series 160i/Series 180i/Series 210i/>
  - Expansion driver library function (A02B-0207-J800)
  - Ladder editing package function (A02B-0207-J820)

  <For Power Mate i-MODEL D/Power Mate i-MODEL H>
  - Expansion driver library function (A02B-0259-J847)
  - Ladder editing package/HSSB function (A02B-0259-J848)

**NOTE**
It is recommended that the Ladder Editing Package (Windows) be used on Windows 95, Windows 98, Windows NT 4.0, or Windows 2000.
1.2 INSTALLATION AND UNINSTALLATION

This section describes how to install or uninstall this software.

1.2.1 Installation

Procedure

1 Preparation prior to installation
   1-1 Before installation, see Section 1.1, "OPERATING
       ENVIRONMENT" to check the environment of the
       computer being used.

2 Starting the installer
   2-1 If any programs are running, terminate them.
   2-2 Set the disk (A08B-9210-J505#ZZ07-1) in the floppy disk
       drive.
   2-3 Click [Start Menu] - [Run]. Type the following in the
       Open field, and then click <OK>

A (floppy disk drive name):¥SETUP.EXE
3 Starting setup and confirming the license agreement

3-1 Ladder Editing Package (Windows) setup starts, displaying the [Choose Setup Language] screen. Select Japanese or English, and then click the <OK> button.

Fig. 1.2.1 (a)

3-2 The [Welcome] screen appears.

Fig. 1.2.1 (b)
3-3 Click the <Next> button. Then, the [Software License Agreement] screen appears.

![Software License Agreement](image)

**Fig. 1.2.1 (c)**

3-4 When you agree to the terms of the license agreement, and wish to continue installation, click the <Yes> button. Clicking the <No> button stops installation.
4 Entering user information

4-1 The [User Information] screen appears.

Fig. 1.2.1 (d)

4-2 Enter [Name] and [Company], and then click the <Next> button. Then, the [Registration Confirmation] screen appears.

Fig. 1.2.1 (e)

4-3 Check that the registration information is correct. To continue the installation, click the <Yes> button. Clicking the <No> button returns you to the [User Information] screen.
5 Selecting the installation destination and program folder

5-1 The [Choose Destination Location] screen appears.

5-2 By default, the program is installed in `C:\Program Files\FANUC PMC Programmer\Ladder Editing Package`. To change the installation destination, click the [Browse] button, and then select the installation destination.

5-3 Click the <Next> button.

5-4 The [Select Program Folder] screen appears.

5-5 Select the program folder in which you want to install the program or create a folder. Then, click the <Next> button.
6 Starting file copy operation and ending the installation

6-1 The [Start Copying Files] screen appears.

![Start Copying Files Screen](image)

**Fig. 1.2.1 (h)**

6-2 Information for starting the program file copy operation is displayed. To change the information, click the <Back> button. Check that the displayed information is correct, and then click <Next>. Then, file copy operation starts.

6-3 As the file copy operation terminates, the [Information] screen appears.

![Information Screen](image)

**Fig. 1.2.1 (i)**

6-4 Clicking [OK] terminates installation.
1.2.2 Uninstallation

Procedure

1 Terminating Ladder Editing Package(Windows)
   1-1 Ladder Editing Package(Windows) cannot be uninstalled while it is running. Terminate Ladder Editing Package(Windows), and then uninstall it.

2 Starting the uninstaller
   2-1 Click [Start Menu] - [Settings] - [Control Panel].
   2-2 On the [Control Panel] screen, click [Add/Remove Programs].
   2-3 The [Add/Remove Programs Properties] screen appears.

![Add/Remove Programs Properties](image)

Fig. 1.2.2 (a)

2-4 Select Ladder Editing Package(Windows), and then click <Add/Remove>.
3 Confirming uninstallation

3-1 A dialog box appears, asking whether you really want to uninstall the program. Select <Yes>.

![Confirm File Deletion](image)

Fig. 1.2.2 (b)

4 Executing uninstallation

The installed files, folders, and start menu items are deleted, and the original system settings are restored. Uninstallation then ends.

The uninstaller sometimes cannot uninstall all the files and folders of Ladder Editing Package(Windows), such that some files or folders may remain after uninstallation. Should this occur, restart the system, and then delete the remaining files/folders by using My Computer or Explorer.
This chapter describes the basic items the user should understand before using Ladder Editing Package (Windows).
2.1 SYSTEM FILES

The system consists of the files described below.

- ***.DLL**
  Install dynamic link library (DLL) files used for node selection in the Windows system directory. For details, refer to the document file saved on the following expansion driver/library disks.
  - Expansion driver/library disk (for Windows, A02B-0207-K726)
  - Driver/library disk (for Windows, A02B-0207-K727 and for Windows 95, A02B-0207-K730)
2.2 START AND END

This section describes how to start and end Ladder Editing Package(Windows).

2.2.1 Starting Ladder Editing Package(Windows)

To start this software, use the following procedure:

Procedure
1. Click the [Start] button.
2. From the [Start] menu, select [Program].
3. From the [Program] menu, select the [Ladder Editing Package(Windows)] folder.
4. From the [Ladder Editing Package(Windows)] folder, select Ladder Editing Package(Windows).

2.2.2 Terminating Ladder Editing Package(Windows)

To terminate this software, use the following procedure:

On the [File] menu, click [Exit]. Alternatively, click (Close) button) in the upper right corner of the parent window.
2.3 WINDOW NAMES AND FUNCTIONS

This section describes the names and functions of the windows displayed by this software.

As shown in the figure below, child windows are displayed within the parent window. These are required for operations such as the creation of sequence programs for the FANUC PMC.

- Parent window
  The main window of this software.
  Multiple child windows can be displayed within the parent window.
• Child window
  Child windows are displayed within the parent window.
  Child windows are used for displaying and editing FANUC PMC sequence programs.

• Main menu
  Each main menu has submenus, as listed below.

- **Toolbar**
  The toolbar contains a set of buttons used for file operations and editing.

- **Edit toolbar**
  The edit tool bar contains a set of buttons used for editing ladder diagrams.
  You can input contacts and coils by using the edit tool bar.

- **Soft keys**
  To perform operations with the currently selected child window, you can select the displayed soft keys either by using the mouse or by pressing keys.

- **Status bar**
  The status bar provides information such as a sequence program name and PMC model name.
2.4 DISPLAYING VERSION INFORMATION

This section describes how to display the version information of this software for purposes of, for example, maintenance.

Procedure
Select [Help] - [About version information…].

![Fig. 2.4](image_url)
This chapter describes how to create and edit sequence programs. A sequence program consists of a title, system parameters, symbols, comments, I/O modules, messages, and ladder/step sequences.
3.1 SEQUENCE PROGRAMS

This section describes sequence programs.
3.1.1 Procedure for Creating Sequence Programs

The following flowchart illustrates the procedure for creating a sequence program.

1. Start control system development
2. Determine targets of control (machine and CNC)
3. Specify control behavior (calculate the number of DI/DO points and determine scale of control)
4. Specify interfaces (assign DI/DO)
5. Create sequence program (design, address mapping, coding)
6. Enter, edit, debug, and print sequence program

- **On-line function**
  - New?
    - Yes: Edit ladder diagram
    - No: Monitor/Edit ladder diagram, Monitor signals
  - Debug completed?
    - No: On-line function
    - Yes: Print?
      - Yes: End
      - No: On-line function

- **Off-line function**
  - Edit ladder diagram
  - Edit mnemonic
  - Debug?
    - Yes: End
    - No: Compile (Link)
  - Decompile
  - Print sequence program
  - End

In online function, programming and monitoring are carried out on a personal computer connected to the PMC.

In offline function, programming is carried out on a personal computer not connected to the PMC.

The other PMC programming systems (for use on OPEN CNC) include FAPT LADDER (DOS), FAPT LADDER-II (DOS), and FAPT LADDER-III (Windows).

Refer to the following manuals:
- FAPT LADDER (for Use on PC) Operator’s Manual (B-66131)
- FAPT LADDER-II Operator’s Manual (B-66184EN)
- FAPT LADDER-III Operator’s Manual (B-63484EN)
• Sequence programs

A sequence program consists of the data listed below.

- Title data
- System parameters
- Symbols/comments
- Message data
- I/O module data
- I/O module comments
- Ladder level 1
- Ladder level 2
- Ladder level 3
- Ladder subprograms
- Step sequence subprograms
- Net comments
- Memory card format data
In Ladder Editing Package (Windows), a file with extension .LAD (hereafter called a LAD file) holds all sequence program data.

### Sequence program (LAD file)

- **Source program**
  - System parameters
  - Title data
  - Symbols/comments
  - Message data
  - I/O module data
  - I/O module comments
  - Ladder level 1
  - Ladder level 2
  - Ladder level 3
  - Subprogram P1
  - Subprogram P2
  - ...:
  - Subprogram Pn
  - Net comments

- **Object code**
- Memory card format data

### NOTE

1. In Ladder Editing Package (Windows), a sequence program to be printed or edited offline is called a source program.

2. An I/O module comment is one given to a module address in the I/O unit. See Section 3.7, “Editing I/O Module Assignment,” for details.
• Data flow

3.1.2 PMC Programming Method

The ladder method is one of the most extensively used methods for programming PMC-based sequence control. Because this method was originally based on control circuits in relay panels, it was initially easy for sequence control engineers to understand. As the number of PMC functions has increased, however, sequence programs have become large and complicated. To cope with this situation, we have introduced step sequence programming.

• What is the step sequence method?
  The step sequence method is a sequence control programming method that is based on a programmable controller. This method is intended to represent a flow of control directly using a flowchart. With this method, an individual control module is described using the conventional ladder method. Therefore, the step sequence method allows the user to visually describe the entire process flow. So, it is suitable for total process control. See “Introduction--Features of Ladder Editing Package (Windows) and its Functions Classified by PMC Model,” for details on the models that can use step sequences.

• Sequence configuration
  Ladder programs can take any one of the following five configurations.
  - Ladder level 1
  - Ladder level 2
  - Ladder level 3
  - Ladder subprogram
  - Step sequence subprogram

NOTE
  Ladder level 3 is omissible.
3.1.3 Work Folders and Online Program Files

- Work folder
  A program work folder is created automatically on a path set up in the TMP environment variable. The work folder is called WFLAD* where * represents a number.

- User file folder
  A user file folder, called MyFladder, is created automatically in the work folder mentioned above. A user file can be saved if required, along with other data files, to a LAD file, when LAD programs are saved. When PMC parameters are transferred with the input/output function, PMC_PRM.PRM in the user file folder is initially set for a parameter file transfer destination and transfer source file name.

- Online program file
  If communication is started, a program is loaded from the PMC, and the following LAD files are created automatically in the LAD folder.

  - If connected with the main PMC:
    PMC0000.LAD to PMC0009.LAD
  - If connected with the loader PMC:
    PMC1000.LAD to PMC1009.LAD

  These files are referred to as online program files.

When there is an online program file, and if communication is started, an online program file that matches that on the PMC is opened automatically. Therefore, the program can be debugged online without loading it from the PMC so often.

NOTE
Only up to ten online program files can be held. When you finish program debugging, save the program file under a different file name.
3.2 EDITING TITLES

This section describes how to enter a title for a program created by the machine tool builder.

**NOTE**

Titles can be displayed and edited only when the current programmer mode (offline/online) is offline. To change the programmer mode to offline, select [Ladder] - [Online/Offline].
3. CREATING AND EDITING SEQUENCE PROGRAMS

3.2.1 Procedure

1. Double-click the <Title> item in the [Program List] screen. The [Edit Title] screen appears.

![Fig. 3.2.1 (a)]

![Fig. 3.2.1 (b)]
1-1 Set the necessary data. The maximum number of characters that can be entered is as listed below:

<table>
<thead>
<tr>
<th>Data</th>
<th>Maximum number of characters that can be entered</th>
</tr>
</thead>
<tbody>
<tr>
<td>Machine builder name</td>
<td>32</td>
</tr>
<tr>
<td>Machine name</td>
<td>32</td>
</tr>
<tr>
<td>CNC/PMC model</td>
<td>32</td>
</tr>
<tr>
<td>Program number</td>
<td>4</td>
</tr>
<tr>

<td>32</td>
</tr>
<tr>
<td>Comment</td>
<td>32</td>
</tr>
</tbody>
</table>

To close the [Edit Title] screen, click the <Close> button.
3.3 EDITING LADDER DIAGRAMS

This section describes how to edit ladder diagrams.

Two different methods can be used to edit ladder diagrams. The first method is offline editing, in which a personal computer for editing ladder diagrams is used standalone, that is, without being connected to the CNC (PMC). The second method is online editing, in which a personal computer for editing ladder diagrams is connected to the CNC (PMC).

• Preparing for offline editing

Procedure

1. Check the current programmer mode (offline or online) on the status bar.

   ![Figure 3.3 (a)]

   Blank: Offline  

   Online: Online

   **Fig. 3.3 (a)**

2. If the current programmer mode is online, select [Ladder] - [Online/Offline] to change the current programmer mode to offline.
• Preparing for online editing.

Procedure

1. Check the current programmer mode (offline or online).
2. If the current programmer mode is offline, select [Ladder] - [Online/Offline] to change the programmer mode to online. Then, select [Ladder] - [Monitor/Editor] to change the ladder mode (monitor or edit) to edit.

NOTE
1. If a ladder program to be edited online does not match one in the PMC, it is impossible to change the ladder mode to edit. Before trying to match the ladder to be edited to that in the PMC, store or load the ladder program to be edited.
2. A level 3 program can be added by right-clicking the [Program List] screen and then clicking [Add LEVEL3]. Level 3 programs can be added only when the current programmer mode is offline.
• Method of displaying the ladder diagram editing screen

Procedure

1. Select [View] - [Program List]. The [Program List] screen appears. (Usually, this screen appears automatically when a LAD file is created or opened.)

![Program List Screen]

L Ladder program
S Step sequence program

Fig. 3.3 (b)
2. On the [Program List] screen, double-click the ladder program you want to edit. Alternatively, select the ladder program and press the [Enter] or [F10] key.

- Summary of the ladder diagram editing screen

![Ladder Diagram Editing Screen Diagram]

3. CREATING AND EDITING SEQUENCE PROGRAMS

**Display pane**
Ladder program is displayed here.

**Edit pane**
Ladder program is edited here. When the ladder program in this pane is inserted or overwrote to the display pane, the ladder program in the display pane is changed.

**Insert button**
Inserts ladders in the ladder program (display pane) to the edit pane.

**Replace button**
Replaces ladders in the ladder program (display pane) with those in the edit pane.

**Erase all button**
Erases all ladders from the edit pane.

**Update button** (for online editing only)
Updates the ladders in the PMC with those in the display pane.

**Undo button** (for online editing only)
Returns the ladders in the display pane to the state existing the last time the [Restore] button was pressed. (This operation nullifies all the changes you made after the latest update.

**Zoom-in button**
Magnifies ladder diagrams.

**Zoom-out button**
Reduces (shrinks) ladder diagrams.

**Resize button**
Make the size of a ladder diagram display match the window size.

**Search button**
Searches the display or edit pane for an address or symbol.

**Address display format**
Specifies the display format for ladders on the display or edit pane.

**Error status**
Displays information about errors.
3. CREATING AND EDITING SEQUENCE PROGRAMS

**Display net [total number of nets]**
On the display pane, displays the range of displayed net numbers and the total number of nets. On the edit pane, displays the current cursor position.

**Ladder mode**
Display the current ladder mode (monitor or edit). To change the ladder mode, select [Ladder] - [Monitor/Editor].

**Input mode**
To change the input mode, press the [Insert] key.

- **Soft keys**
  The following shows the soft keys that can be used with the edit pane.

  - When the Shift key is not pressed

    ![Fig. 3.3 (d)](image)

    - When the Shift key is pressed

      ![Fig. 3.3 (e)](image)

  **NOTE**
  To display soft keys, select [View] - [Softkey].

- **Edit tool bar**

  ![Fig. 3.3 (f)](image)

  The edit tool bar contains buttons for entering relays and coils, using the mouse. When you click a button on the edit tool bar and move the mouse pointer to the edit pane, the mouse pointer changes its shape to the relay or coil corresponding to the clicked button. Under this condition, left-clicking causes the relay or coil to be entered in the current mouse pointer position. Right-clicking resumes the usual mouse pointer shape.

  **NOTE**
  1. To display the edit tool bar, select [View] - [Edit ToolBar].
  2. The edit tool bar can be detached from the window to which it belongs and moved to any position on the screen by clicking between its buttons and dragging.

3.3.1 Changing Ladder Programs

This subsection describes how to modify ladder programs.

**NOTE**
1. To modify a ladder program, copy ladders from the display pane to the edit pane. Then, change them on the display pane and substitute the ladders on the display pane with those modified on the edit pane.
2. If there is a ladder error in the ladders on the edit pane, it is impossible to select the <Insert> and <Replace> buttons.
3. Double-clicking a ladder on the display pane causes the ladders in the same net as the clicked ladder to be copied to the edit pane.

Procedure

1. On the display pane, position the cursor to the ladder you want to modify, using the cursor control keys.

![Figure 3.3.1 (a)](image-url)
2. Press the [Enter] key. (Alternatively, double-click the ladder you want to modify.)

![Fig. 3.3.1 (b)](image)

3. Modify the ladder on the edit pane.
   For an explanation of how to operate ladders on the edit pane, see the subsections listed below:

<table>
<thead>
<tr>

<tr>
<td>Entering function instructions</td>
<td>3.3.4 &quot;Entering Function Instructions&quot;</td>
</tr>
</tbody>
</table>
4. After you finished modifying ladders, click the <Replace> button.

5. Select the replacement position, using the [↓] key or [↑] key, and then click the <Exec> button.
3.3.2 Inserting Ladders from the Edit Pane into a Ladder Program

This subsection describes how to insert ladders from the edit pane into a ladder program (on the display pane).

**NOTE**
1. If there is a ladder error in a ladder in the edit pane, it is impossible to select the <Insert> and <Replace> buttons.
2. Double-clicking a ladder in the display pane causes the ladders in the same net as the clicked ladder to be copied to the edit pane.

Procedure
1. In the edit pane, create the ladders you want to insert into a ladder program.
   For an explanation about how to operate the ladders on the edit pane, see the subsections listed below:

<table>
<thead>
<tr>

<td>3.3.6 “ENTERING AND DELETING VERTICAL LINES”</td>
</tr>
<tr>
<td>ENTERING FUNCTION INSTRUCTIONS</td>
<td>3.3.4 “ENTERING FUNCTION INSTRUCTIONS”</td>
</tr>
</tbody>
</table>

![Fig. 3.3.2 (a)](image)
2. Click the <Insert> button.

3. Select the insertion position, using the [↓] key or [↑] key, and then click the <Exec> button.
3.3.3 Entering Basic Instructions

This subsection describes how to enter basic instructions (relays and coils) in the edit pane.

Procedure

1. Position the cursor to the point where you want to enter a basic instruction, using the cursor control keys. (Alternatively, click the point.)

2. Press the key that corresponds to the basic instruction you want to enter.

<table>
<thead>
<tr>
<th>Key</th>

</tbody>
</table>

Fig. 3.3.3 (a)
3. Position the cursor to the basic instruction you entered, using the cursor control keys, and then press the [Enter] key. (Alternatively, double-click the basic instruction.)

Fig. 3.3.3 (b)

4. Enter an address or symbol, and then press the [Enter] key.

Fig. 3.3.3 (c)
3.3.4 Entering Function Instructions

This subsection describes how to enter function instructions in the edit pane.

Procedure

1. Position the cursor to the point where you want to enter a function instruction, using the cursor control keys. (Alternatively, click the point.)

![Fig. 3.3.4 (a)](image)

2. Press the \[F9\] key to display the [Select function] dialog box.

![Fig. 3.3.4 (b)](image)
3. Select the function instruction you want to enter, and then press the <OK> button.

4. Enter the parameters for the instruction you entered.
3.3.5 Entering Horizontal Lines

This subsection describes how to enter horizontal lines in the edit pane.

Procedure
1. Position the cursor to the point where you want to enter a horizontal line. (Alternatively, click the point.)

This subsection describes how to enter and delete vertical lines in the edit pane.

Procedure
1. Position the cursor to the point where you want to enter a vertical line, using the cursor control keys. (Alternatively, click the point.)
3. CREATING AND EDITING SEQUENCE PROGRAMS

2. Press the [F8] key, and then press the [↑] or [↓] key. The vertical line is entered. (To delete the vertical line, hold down the [Shift] key and then press the [↑] or [↓] key.)

Fig. 3.3.6 (b)
3.3.7 Adding Ladder Subprograms

This subsection describes how to add ladder subprograms.

Procedure

1. Right-click on the program list screen, and then click [Add sub-program F9].

2. The [Add sub-program] dialog box appears.

3. Enter [sub-program].
4. Select [Ladder] from [Kind of Ladder].
5. Enter [Symbol] and [RelayComment], and then click the <OK> button.
6. The subprogram is added, and the screen for the added ladder program appears.
3.3.8 Deleting Ladder Subprograms

This subsection describes how to delete subprograms.

Procedure

1. On the program list screen, position the pointer to the subprogram you want to delete and right-click. Then, click [Delete subprogram F6].

2. The following dialog box appears. To delete the subprogram, click <Yes>.
This subsection describes how to edit net comments.

- Procedure for adding net comments

1. In the display pane, position the mouse pointer to the point where you want to add a net comment, and then right-click.

2. Select [Insert] - [Net comment], and then enter a net comment.
To check the number of characters in the entered net comment, press the <Preview> button. The preview screen appears.

3. After you finish entering the net comment, press the <OK> button.
• Procedure for editing net comments

1. In the display pane, double-click the net comment you want to modify.
The [Net comment] screen appears.

2. Edit the character strings for the net comment. After you finish editing, press the <OK> button. The net comment in the display pane is updated.
3.3.10 Deleting Net Comments

This subsection describes how to delete net comments.

Procedure

1. In the display pane, position the mouse pointer to the net comment you want to delete, and then right-click.

2. Select [Delete] - [Net comment].

3. The following dialog box appears. To delete the net comment, select <OK>.

---

**Fig. 3.3.10 (a)**

**Fig. 3.3.10 (b)**
3.3.11 Adding Page Breaks

This subsection describes how to add page breaks.

Procedure

1. In the display pane, position the mouse pointer to the point where you want to add a page break, and then right-click.

2. Select [Insert] - [New page]. The page break is added.
3.3.12 Deleting Page Breaks

This subsection describes how to delete page breaks.

Procedure

1. In the display pane, position the mouse pointer to the page break you want to delete, and then right-click.

2. Select [Delete] - [New page].

3. The following dialog box appears. To delete, select <OK>.

Fig. 3.3.12 (a)

Fig. 3.3.12 (b)
3.3.13 Search

This subsection describes the ladder program search function.

Procedure

   ![Search screen](image)

   **Fig. 3.3.13(a)**

   1-1 **Search kind**
   Select Address/Symbol or Functional instruction.

   1-2 **Program**
   Click the <Select> button to open the [Program select dialog] screen, then select a search target program.

   ![Program select dialog](image)

   **Fig. 3.3.13(b)**
2. Select the [Search condition setting] tab. The screen corresponding to a selected search kind is displayed.

- When Address/Symbol is selected

![Fig. 3.3.13(c)](image)

2-1 **Instruction for search**
Check search target instructions.

- When Functional instruction is selected

![Fig. 3.3.13(d)](image)

2-2 **Parameter**
Enter parameters as search conditions according to Functional instruction selected in Search kind.
3. Select the [Search setting] tab.

![Search Setting Tab](image)

3-1 **Search string**
Enter a character string to be searched for.
In a character string to be found, two types of wildcards can be used: a question mark (?) and an asterisk (*). A wildcard substitutes for one or multiple characters.
A question mark (?) is used to represent zero or one character. This wildcard can be used more than once to represent characters.
An asterisk (*) represents zero or more characters.
Multiple addresses can be specified by delimiting them from each other by a comma (,) or semicolon (;).
(Example: Y0.0;X0.0)

3-2 **Wildcard search**
Check this check box if a specified character string to be found includes wildcards.

3-3 **Search direction**
Select Upper direction or Lower direction as the direction of search.
3.4 **Search result list display**

Check this check box to display the search results on the [Search result list (call)] screen in a batch.

The [Search result list (call)] screen displays program numbers, net numbers, ladder diagrams, and coil comments.

![Fig. 3.3.13(f)](image)

4. **Execute search operation.**

   If [Search result list display] is checked, click the <Exec> button.
   In other cases, click the <Next search> button.
3.3.14 Collective Display

Collective display is a function with which nets extracted under multiple search conditions can be monitored (in the online mode) and displayed in one window.

3.3.14.1 Setting collective display extraction conditions

Procedure

1. Double-click the <Collective Display> item on the [Program List] screen. The [Collective Display] screen appears. For buttons and input items, see the next page and later.
2 Click the <Add Condition> button. The [Search] screen appears.

Fig. 3.3.14.1(c)

2-1 After setting search conditions, click the <OK> button. For each setting item, see Subsection 3.5.13, "Search."

3 The [Setting of search condition-name] screen appears.

Fig. 3.3.14.1(d)

3-1 A character string that consists of the words "Search of" added to the start of a character string set in Search string on the [Search] screen is displayed. (Example: Search of Y0.0)

A set character string can be modified.

A set character string is displayed as a search condition name in the search condition list on the [Search Monitor] screen.

3-2 After setting a desired character string, click the <OK> button.
3. CREATING AND EDITING SEQUENCE PROGRAMS

![Collective Display](image)

Fig. 3.3.14.1(e)

5. Repeat steps 2 through 4 to add search conditions.

![Collective Display with options](image)

Fig. 3.3.14.1(f)

5-1. **<Edit Condition> button**
This button is used to edit the search condition where the cursor is placed.

5-2. **<Rename Condition> button**
This button is used to rename the search condition where the cursor is placed.

5-3. **<Delete Condition> button**
This button is used to delete the search condition where the cursor is placed.
6. Check the check boxes of search conditions to be enabled, then set a desired collective display condition name in Condition Name.

6-1. Click the <OK> button. Extracted nets are collectively displayed on the screen. The same information can also be monitored in the online mode. An extraction condition is added to the <Collective Display> item on the [Program List] screen.
3.3.14.2 Executing collective display

Procedure

1. On the [Program List] screen, move the mouse pointer to the extraction condition used for collective display execution, then click the right mouse button.

2. Choose [Open]. Then, the extracted nets are collectively displayed on the screen. The same information can also be monitored in the online mode.
3.3.14.3 Modifying collective display extraction conditions

Procedure

1. On the [Program List] screen, move the mouse pointer to an extraction condition to be modified, then click the right mouse button.

2. Choose [propeRty]. Then, the [Collective Display] screen appears. For extraction condition setting, see Subsection 3.3.14.1, "Setting collective display extraction conditions."
3.3.14.4 Deleting collective display extraction conditions

Procedure

1. On the [Program List] screen, move the mouse pointer to an extraction condition to be deleted, then click the right mouse button.

![Fig. 3.3.14.4(a)](image)

2. Choose [Delete]. Then, a message for checking whether the selected condition may be deleted appears. Click the <Yes> button to execute deletion. Click the <No> button to cancel deletion.

![Fig. 3.3.14.4(b)](image)
3.3.15 Setting the Number of Contacts and Coils per Row

On a ladder display screen (monitor, editing, or collective display), the number of contacts and coils displayed per row can be specified.

Procedure

1. From the [Tool] menu, choose [Options], then double-click [Display].

2. Move the cursor to [Number of contacts + coil a line], then set the desired number of contacts and coils per row. (A value from 8 to 20 (columns) can be set.)

3. Click the <OK> button. The set number of contacts and coils is applied to display.

NOTE

1. If the number of contacts and coils per row is changed, a ladder diagram in the edit pane and clipboard is deleted, and reediting is disabled.

2. A net that has more relays or coils than the set number of contacts and coils is displayed as a continuation net as conventionally done.
3.4 EDITING STEP SEQUENCES

This section describes how to edit step sequence programs.

**NOTE**

Step sequence programs can be displayed and edited only when the current programmer mode (offline/online) is offline. To change the programmer mode to offline, select [Ladder] - [Online/Offline].

- How to display the step sequence edit screen

Procedure

1. Select [View] - [Program List]. The [Program List] screen appears. (Usually, this screen appears automatically when a LAD program is created or opened.)

2. On the [Program List] screen, double-click the step sequence program you want to edit. Alternatively, select the step sequence program, and then press the [Enter] or [F10] key.
• Summary of step sequence program edit screen

- **Step sequence program name**
- **Address display method selection button**
- **Search button**
- **Check button**
- **Zoom-in button**
- **Zoom-out button**
- **Cursor**

**Fig. 3.4 (b)**

**Zoom-out button**
Reduces the step ladder screen display.

**Zoom-in button**
Magnifies the step ladder screen display.

**Search button**
Searches for a step number and action.

**Address display method selection button**
Switches between address and symbol displays.

**Check button**
Check program syntax.

**Information about element in the cursor position**
Displays a step number, action (subprogram), and label number.
Cursor position
Displays the row and column of the current cursor position.

NOTE
The step sequence program edit screen consists of 32 horizontal elements by 64 vertical lines.

- Soft keys
  - When the Shift key is not pressed (the cursor is on the “processing step line”)

- When the Shift key is pressed (the cursor is on the “processing step line”)

- When the Shift key is not pressed (the cursor is on the “condition specification TR”)

- When the Shift key is pressed (the cursor is on the “condition specification TR”)

NOTE
To display soft keys, select [View] - [Softkey].
• Context menu

Right-clicking the step sequence program edit screen displays this menu.

</table>
3.4.1 Step Sequence Configuration

A step sequence program consists of the following elements:

- **Step**
  A step is a unit of processing in a program.

- A step number [Sn] necessary to control execution and a subprogram [Pm] that describes actual processing are defined for a step.
- Each step is always assigned with a step number. A duplicate step number cannot be used in a program.
- A step can be in any one of three logical states: running, stopping, and stopped. The running state is also called an active state. The stopping and stopped states are collectively referred to as inactive states.

<table>
<thead>
<tr>
<th>State</th>
<th>Processing</th>
<th>Sn.0</th>
</tr>
</thead>
<tbody>
<tr>
<td>Active</td>
<td>The step is active. The corresponding action program (subprogram) is running.</td>
<td>1</td>
</tr>
<tr>
<td>Inactive</td>
<td>The step is shifting from running to stopped. The corresponding action program (subprogram) is executed only once. After this it is stopped.</td>
<td>0</td>
</tr>
<tr>
<td>Stopped</td>
<td>The step is inactive. The corresponding action program (subprogram) is not running.</td>
<td>0</td>
</tr>
</tbody>
</table>

**NOTE**

The state of a specified step can be read through a contact; it cannot be written, however. **Sn.0** (where n represents a step number, which can take a value from 1 to 1000)

Step numbers are used in a program so that transition between steps can be controlled in detail. Using step numbers makes it possible for any subprogram to detect the state of any step. However, the use of step numbers adversely affects program transportability and ease of understanding. Do not use step numbers excessively.
Initial step
An initial step is a step that automatically becomes active when the program starts running. Except for this point, the initial step behaves in the same manner as ordinary steps. Control can be passed from a usual step to the initial step again. In this case, the initial step behaves in exactly the same manner as an ordinary step.

- A step number \([Sn]\) necessary to control the execution and a subprogram \([Pm]\) that describes the actual processing are defined for an initial step.
- All initial steps become active when no other step is running.
- Each block must have at least one initial step. It can have any number of initial steps.
- If a block has no initial step, it is not executed even if called.
- Each initial step is always assigned a step number. A duplicate step number cannot be used in a program.
- If there are initial steps in the middle of parallel branching, there must be at least one initial step in each flow.
• Transition
  A transition represents a condition under which transition occurs
  from one step to another.

- There must be only one transition between steps.
- The transition of processing from one step to another is
  carried out as described below:

  ![Transition Diagram]

  - When S1 is running, only S1 and P101 are
    processed. The other steps or transitions are not
    executed. Even if P102 is satisfied, it is invalid
    unless S2 is running.

  - Transition from S1 to S2 can occur if P101 is
    satisfied. When P101 is satisfied, S1 ends
    regardless of the state of S1, allowing S2 to start.

- When a signal becomes on in a transition, its state is held
  even after state transition occurs. So, if you do not want
  to maintain the state, you must turn off the signal, using
  another subprogram.

[Example of setting transition conditions]
In this example, after an M7 code is decoded using the DEC
function instruction, control is passed to the next step.

![Transition Example Diagram]

**NOTE**
The TRSET function instruction is intended to describe
that a transition condition is satisfied. It is used in a
subprogram that is called from the transition.
3. CREATING AND EDITING SEQUENCE PROGRAMS

• Beginning of selective branch
  A branch occurs from one step to two or more steps, passing control to a step below a transition where the condition is satisfied.

- A transition is placed below a branch.
- A step leading to the first transition where the transition condition is satisfied becomes active.
- If transition conditions for more than one step are satisfied simultaneously, transition occurs to the leftmost step.
- A branch can occur to up to 16 flows.

• End of selective branches
  Two or more flows that branched out gather back into one flow.

- The number of branching flows must match that of the gathering flows.

• Beginning of parallel branch
  A branch occurs from one step to two or more steps, which become active simultaneously.

- A transition is placed above a branch.
- After branching, all steps become active simultaneously and are executed.
- A branch can occur to up to 16 flows.
• **End of parallel branch**
  Two or more flows that branched out gather into one flow.

- **How parallel flows gather again** is explained below.

- **How wait processing occurs** is explained below.

- **If you want to set separate end conditions for steps S11 and S16, specify P111 and P116 as end conditions, and describe S12 and S17 as dummy steps, as shown on the left.**

  Step and subprogram numbers must be specified for a dummy step, too. In addition, P110 must be specified as a dummy transition that is always on.
3. CREATING AND EDITING SEQUENCE PROGRAMS

- **Jump**
  A jump is processed in conjunction with a transition to control the execution of steps.

  - A jump-to label [Ln] is specified.
  - The step at a jump destination becomes active.
  - The jump destination must be within the same program.
  - It is impossible to jump from outside to inside a parallel branch and vice versa.
  - It is impossible to jump from one parallel branch flow to another.

- **Label**
  A label represents a jump destination.

  - A jump-to label [Ln] is defined.

- **Block step**
  The block step is a step for representing a subprogram described with step sequences.

  - A step number [Sn] necessary to control execution and a subprogram [Pm] that describes actual processing are defined for a block step.
  - A step number must be assigned to a step.
  - Duplicate step numbers cannot be used in a program.
  - There must always be a transition below a block step.

Transition P102 cannot be omitted. A subprogram for P102 must be a dummy transition that is always satisfied.

Write a condition for terminating step S21 in transition P121.

If transition P102 is exchanged with P121, processing at step S21 does not work normally.
• Initial block step
  The initial block step is an initial step in a block.

- A step number [Sn] necessary to control execution and a subprogram [Pm] that describes actual processing are defined for an initial block step.
- The function and representation of the initial block step are the same as for the initial step.

• End block step
  The end block step represents the end of the steps in a block.

- An end block step is created to end block step processing.
- Each block must have at least one end block step. It can have any number of end block steps.
3.4.2 Entering Steps

Procedure

1. Position the cursor to the point where you want to enter a step.

3. The [Action] dialog box appears. Enter the necessary items. (An idle step number is used automatically.)

   ![Action dialog box](image)

4. After you finish entering the items, press the <OK> button.

   ![Entered step](image)

**NOTE**
To change a step number, action, or label, position the cursor to the desired element, and then press the [Enter] key. Alternatively, double-click the element. The [Action] dialog box appears.
3.4.3 Entering Transitions

Procedure

1. Position the cursor to the point where you want to enter a transition.

3. The [Action] dialog box appears. Enter the desired action.

4. After you finish entering the action (subprogram), press the <OK> button.

NOTE
To modify an action, position the cursor to the relevant element, and then press the [Enter] key. Or, double-click the element. The [Action] dialog box appears.
3.4.4 **Beginning of Selective Branch**

Procedure

1. Position the cursor to the point where you want to enter the beginning of a selective branch.

3.4.5 **End of Selective Branch**

Procedure

1. Position the cursor to the point where you want to enter an end of selective branch.

2. Hold down the [Shift] key, and then press the [F5] key.
3.4.6 Beginning of Parallel Branch

Procedure

1. Position the cursor to the point (transition line) where you want to enter the beginning of parallel branch.

---

3.4.7 End of Parallel Branch

Procedure

1. Position the cursor to the point where you want to enter the end of a parallel branch.

2. Hold down the [Shift] key, and then press the [F6] key.
3.4.8 Specifying Jump-to Label

Procedure

1. Position the cursor to the point (step line) where you want to enter a jump-to label (a label to which a jump is to be made).

2. Hold down the [Shift] key, and then press the [F6] key.

3. The [Action] dialog box appears. Enter the label name.

4. After you finish entering the label name, press the <OK> button.
3.4.9 Specifying Label Jump

Procedure

1. Position the cursor to the point (step line) where you want to enter a label jump.

2. Hold down the [Shift] key, and then press the [F5] key.

3. The [Action] dialog box appears. Enter the label.

4. After you finish entering the label, press the <OK> button.
3.4.10 Checking Syntax

Procedure

1. Press the [F9] key.
   - If no error is found, the following dialog box appears.

   ![Fig. 3.4.10 (a)](image)

   - If an error is found, the following dialog box appears.

   ![Fig. 3.4.10 (b)](image)
### 3.4.11 Adding Step Sequence Subprograms

This subsection describes how to add step sequence subprograms.

**Procedure**

1. Right-click the program list screen, and then click [Add sub-program F9].

![Image](image1.png)

**Fig. 3.4.11 (a)**

2. The [Add sub-program] dialog box appears.

![Image](image2.png)

**Fig. 3.4.11 (b)**

3. Enter [sub-program].
4. Select [Step Sequence] from [Kind of Ladder].
5. Enter [Symbol] and [RelayComment], and then click the <OK> button.
6. The step sequence subprogram is added, and the screen for the added subprogram appears.
3.4.12 Deleting Step Sequence Subprograms

This subsection describes how to delete step sequence subprograms.

Procedure

1. Position the pointer to the step sequence subprogram that you want to delete from the program list screen, and then right-click. Then, click [Delete sub-program F6].

2. The following dialog box appears. To delete, click <Yes>.
3.4.13 Search

This subsection describes the step sequence program search function.

Procedure

1 Choose [Find] from the [Edit] menu.
   The [Find] screen appears.

   ![Fig. 3.4.13](image)

   **1-1 Search type**
   Select Step number, Label number, or Symbol/address.

   **1-2 Search string**
   Enter a character string to be searched for.
   No wildcard can be used.

2 Execute search operation.
   For downward search operation, click the <OK> button. For upward search operation, click the <OK> button while holding down the [Shift] key.
3.5  EDITING SYMBOLS AND COMMENTS

This section describes how to edit symbols and comments.

### NOTE
Symbols and comments can be displayed and edited only when the current programmer mode (offline/online) is offline. To change the programmer mode to offline, select [Ladder] - [Online/Offline].

#### 3.5.1 Symbol and Comment Data

Names and comments can be assigned to the input signals and internal relays used in sequence programs. These names and comments are generically referred to as symbol and comment data.

<table>
<thead>
<tr>

Copy
Paste
Delete

Fig. 3.5.4
3.6 EDITING MESSAGES

Using the DISPB (SUB 41) function instruction enables the display of any message on the CRT/MDI screen of the CNC. This section describes how to create messages.

NOTE
Messages can be displayed and edited only when the current programmer mode (offline/online) is offline. To change the programmer mode to offline, select [Ladder] - [Online/Offline].
3.6.1 Procedure

   The [Message Editing] Screen appears.

   ![Fig. 3.6.1 (a)](image1)
   ![Fig. 3.6.1 (b)](image2)

1-1 Enter a message.

2. To close the [Message Editing] screen, click the <Close> button.

   ![<Close> button](image3)
3.6.2 Models and Quantity of Usable Characters

The types of characters usable in message text vary depending on the CNC/PMC model. See the following table for details.

<table>
<thead>
<tr>
<th>CNC</th>
<th>PMC</th>
<th>Characters that can be entered</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>JIS level-1/-2 kanji set</td>
</tr>
<tr>
<td>FANUC Series 18</td>
<td>PMC-SA1/SA3</td>
<td>B</td>
</tr>
<tr>
<td>FANUC Series 21</td>
<td>PMC-SA1/SA5</td>
<td>B</td>
</tr>
<tr>
<td></td>
<td>PMC-SB6</td>
<td>B</td>
</tr>
<tr>
<td>FANUC Power Mate</td>
<td>PMC-PA3</td>
<td>B</td>
</tr>
<tr>
<td></td>
<td>PMC-SB5/SB6</td>
<td>B</td>
</tr>
<tr>
<td>FANUC Series 15</td>
<td>PMC-NB/NB2/NB6</td>
<td>B</td>
</tr>
</tbody>
</table>

B: Some kanji characters cannot be displayed. Ladder Editing Package (Windows) cannot check whether they can be displayed.

C: With Ladder Editing Package (Windows), these characters cannot be entered.

**NOTE**

1. Lowercase letters (a to z) are converted to uppercase (A to Z) when entered.
2. Up to 65,535 characters can be used in messages in total. Specifically, the number of characters in messages are counted starting at message No. 1, when the message edit function ends. Only the first 65,535 characters are accepted. Others are deleted.
3.6.3 Memory Addresses Required to Display Messages

The following table summarizes the range of addresses that can be specified in each PMC and the quantity of messages that can be held.

<table>
<thead>
<tr>
<th>Address range</th>
<th>Message quantity</th>
<th>PMC</th>
</tr>
</thead>
<tbody>
<tr>
<td>A0.0 to A24.7</td>
<td>200</td>
<td>PMC-PA3, PMC-SA1/SA3/SA5, PMC-SB3/SB5, PMC-SC3, PMC-NB</td>
</tr>
<tr>
<td>A0.0 to A124.7</td>
<td>1000</td>
<td>PMC-SB4/SB6, PMC-SC4, PMC-NB2/NB6</td>
</tr>
</tbody>
</table>

3.6.4 Entering Special Characters

3.6.4.1 New line character

To enter a new line character, press the [Enter] key. On the screen, a dot “□” is used to represent a new line character. On the code input mode screen, enter “@” followed by “0A.” Using the view function enables you to confirm whether the displayed message is actually continued on the next line. See Section 3.6.5, “Toolbar,” for an explanation of the code input mode and view function.

3.6.4.2 Numeric data

In code input mode, a message is entered using the following numeric data format.
[Ibid,____]
Letter I prefixes the “bid” information.
b: The number of bytes (1, 2, or 4) is specified.
i: The number of digits in the integer part (0 to 8) is specified.
d: The number of digits in the decimal part (0 to 8) is specified.
_____: Address where numeric data is stored.
Example: [I232,D300]
Usually, as many dots “•” as the number of digits in the character string (from [ to ]) representing numeric data are displayed on the input mode screen. Example: ••••••••••
With the view function, as many number signs (#) as the number of specified digits are displayed in bold.
Example: ###.##
See Section 3.6.5, “Toolbar,” for explanations about the code input mode and view function.
3.6.5 Tool Bar

Fig.3.6.5

1. Search button
   Searches for a character string.

2. Search direction button
   Specifies the direction (upward or downward) in which a search is to be made.

3. Find what edit box
   Lets you specify what to find.

4. Replace button
   Replaces the occurrences of a specified character string one by one.

5. Replace all button
   Replaces all the occurrences of a specified character string.

6. Replace with edit box
   Lets you specify a character string for substituting an occurrence of a specified character.

7. Code input mode button
   Lets you specify message data in code format. Enter a message, using numeric code (JIS).
   Example: 2100 日本語表示
   2100 @02467C4B5C386C493D4C2801@

8. View button
   Lets you confirm that the message character string is in such a format that it is continued on a new line.
   It is possible to specify the number of characters to be displayed per line (32 to 80 characters).

9. Jump button
   Causes a jump to a specified address (A0.0 to A24.7/A124.7).

10. Jump address character string edit box
    Lets you specify a character string as a jump address.

11. Jump address value up/down button
    Increases or decreases the jump address value.

12. Invalid kanji character check button
    Searches for kanji characters not displayable on the NC downward starting at the cursor position. (When search operation reaches the end, search operation resumes from the beginning.)
    This button is enabled only with those PMC models that have a VGA indicator.
3.6.6 Status Bar

Fig. 3.6.6

<1> The status bar displays the number of bytes in a message on the current line (that line with a caret).

3.6.7 Shortcut keys

<table>
<thead>
<tr>
<th>Shortcut key</th>
<th>Corresponding function</th>
</tr>
</thead>
<tbody>
<tr>
<td>[F3]</td>

3.7 EDITING I/O MODULE ASSIGNMENT

This section describes how to set and delete an address for each module in an I/O unit.

**NOTE**

I/O module assignment can be displayed and edited only when the current programmer mode (offline/online) is offline. To change the programmer mode to offline, select [Ladder] - [Online/Offline].
3.7.1 Procedure

---

Fig. 3.7.1 (a)

Fig. 3.7.1 (b)
1-1 Double-click the line that you want to edit. The [Module] screen appears.

1-2 Select a module name from those that can be specified. Set the following data.

- **Group**
- **Base**
- **Slot**
- **Comment**

**NOTE**

I/O Unit MODEL-B assignment is carried out as follows:

- **[GROUP]**: To be set with a group number within a configuration.
- **[BASE]**: To always be set to 0.
- **[SLOT]**: To be set to a unit number for the I/O Unit-B. To be set with 0, however, when information ‘##’ about power-on/-off is assigned.
3.CREATING AND EDITING SEQUENCE PROGRAMS

To assert the data you entered, click the <OK> button.

![OK button]

To ignore the data, click the <Cancel> button.

2 To close the [Edit I/O Module] screen, click the <Close> button.

![Close button]

3.8 EDITING SYSTEM PARAMETERS

This section describes how to edit system parameters.

NOTE
System parameters can be displayed and edited only when the current programmer mode (offline/online) is offline. To change the programmer mode to offline, select [Ladder] - [Online/Offline].
3.8.1 Procedure

Fig. 3.8.1 (a)

Fig. 3.8.1 (b)
1-1 Set the necessary data.

**Counter Data Type**

Initial value: BINARY

Set the format of the counter value to be used in the CTR function instruction as binary or BCD.

**Ladder Exec**

(Valid only with the PMC-SC3/SC4, PMC-QC, and PMC-NB/NB2)

Initial value: 100

Setting: 1 to 150

Set an increment for the processing time for ladder levels 1 and 2. Setting this parameter reduces the ladder scan time, thus quickening ladder processing. The ladder execution time takes the value described below out of 8 ms.

- If 100% is specified, the processing time for levels 1 and 2 is 5 ms.
- If 150% is specified, the processing time for levels 1 and 2 is 7.5 ms.

Note that increasing the ladder execution time decreases the processing time in “PMC Screen Display Time”, “Language Program Processing Time”, and “Ladder Level 3”.

**Language Exec Ratio**

(Valid only with the PMC-SC3/SC4, PMC-QC, and PMC-NB/NB2)

Initial value: 50

Setting: 0 to 99

This parameter sets a ratio for dividing the processing time in “PMC Screen Display Time”, “Language Program Processing Time”, and “Ladder Level 3”, because the language program and the PMC screen display have the same priority. Setting this parameter makes it possible to run the language program cyclically, even when the PMC screen display is active.

**Language Origin**

(Valid only with the PMC-SC3/SC4, PMC-QC, and PMC-NB/NB2)

Initial value: 000000

Setting: Address within the language program storage area

Set the start address of the link control statement data in the language program. Specify 000000H if no language program is included.
FS0 Operator Panel
Initial value: No FS0 machine operator’s panel (check off)
Specify whether the FS0 machine operator’s panel is available. If you select this item, specify the actual DI/DO address connected to the machine operator’s panel, the address of a KEY image transferred from the operator’s panel, and the address of an LED image to be transferred to the operator’s panel.

Key Address
Setting range: X0 to X127 and X1000 to X1019
Set the PMC address corresponding to the start address of the external DI that is connected.

LED Address
Setting range: Y0 to Y127 and Y1000 to Y1014
Set the PMC address corresponding to the start address of the external DO that is connected.

Key Bit Image Address
Set the PMC address corresponding to the start address of KEY image to be referenced by a user program.
Usually, specify an arbitrary internal relay area.

LED Bit Image Address
Set the PMC address corresponding to the start address of LED image to be referenced by a user program.
Usually, specify an arbitrary internal relay area.

2 To close the [Edit System Parameter] screen, click the <Close> button.

<Close> button
3.9 SAVING PROGRAMS WITH NAMES

This section describes how to name and save a sequence program (LAD file).

3.9.1 Procedure

1. Select [File] - [Save As].
   The [Save As] screen appears.

   ![Save As Dialog](image)

   **Fig. 3.9.1**

   1-1 Enter the file name you want to use.
   1-2 To save the program, click the <OK> button.
   To quit saving, click the <Cancel> button.
3.10 IMPORTING PROGRAMS

This section describes how to import (copy in overwrite mode) data files, ladder diagrams, and subprograms from a LAD program to another sequence program that is currently open. It also explains how to import (convert and copy in overwrite mode) files on a memory card, ROM, or Handy file format to a currently open sequence program file in memory card format.

3.10.1 Procedure

![Import/Export screen](image)

Fig. 3.10.1 (a)

1-1 Select the files you want to import.

- **FAPT LADDER-III File (*.LAD)**
  A data file is imported from a sequence program (LAD file) for the same PMC model.

- **Memory-card Format File**
  A memory card format file is imported. It is written over a memory card file (MCARD) for the currently open sequence program.

- **ROM Format File**
  A ROM format file is imported. It is written over a memory card file (MCARD) for the currently open sequence program.
Handy-file Format File
A Handy file format file is imported. It is written over a memory card file (MCARD) for the currently open sequence program.

User File
An arbitrary user file is imported to the user file folder (MyFladder) for the currently open sequence program. See Subsection 3.1.3, “Work Folders and Online Program Files,” for an explanation about the user file folder.

2 Click the <Next> button.
The [Import/Export -- Specify import file name] screen appears.

2-1 Specify the file you want to import.
If the FAPT LADDER-III file (*.LAD) is selected as an import-from file in step 2, above
3 Click the <Next> button.
The [Import/Export --Select Data File, Ladder Diagram, Subprogram, and/or User File] screen appears.

3-1 Select the types of files you want to import.

4 Click the <Finish> button.
The message “Edit folder data file will be replaced/Added, Are you sure?” appears.

To import, click the <Yes> button.
To return to the [Import/Export -- Select Data File, Ladder Diagram, Subprogram, and/or User File] screen without continuing, click the <No> button.

5 To quit importing, click the <Cancel> button on the [Import/Export File--Select Data File, Ladder Diagram, Subprogram, and/or User File] screen.
♦ If the memory format file, ROM format file, and/or Handy file format files are selected as the types of files you want to import in step 2, above

3 Click the <Finish> button.
   The message “Succeed Change Data” appears.

![Fig. 3.10.1 (e)](image)

Click the <OK> button.
The message “Decompile” appears.

![Fig. 3.10.1 (f)](image)

If you do not want to decompile, click the <No> button.
To decompile, click the <Yes> button. The [Decompile] screen appears.

![Fig. 3.10.1 (g)](image)

♦ If a user file is selected as the type of file you want to import in step 2, above

3 Click the <Finish> button.
3.11 EXPORTING PROGRAMS

This section describes how to export (copy in overwrite mode) data files, ladder diagrams, and subprograms from the currently open sequence program to another LAD program. It also explains how to export (convert and copy in overwrite mode) the currently open sequence program memory card format file to files on a memory card, in ROM, and/or Handy file format.

### 3.11.1 Procedure

1. Select [File] - [Export].
   The [Import/Export --Select export file type] screen appears.

   ![Fig. 3.11.1 (a)](image)

   1-1 Select the types of files you want to export.

   **FAPT LADDER-III File (*.LAD)**
   A data file is exported to a sequence program (LAD file) for the same PMC.

   **Memory-card Format File**
   A memory card file (MCARD) is exported from the currently open sequence program to a file in memory card format.

   **ROM Format File**
   A memory card file (MCARD) is exported from the currently open sequence program to a file in ROM format.
Handy-file Format File
A memory card file (MCARD) is exported from the currently open sequence program to a file in Handy file format.

User File
A user file is exported from the user file folder (MyFladder) for the currently open sequence program. See Subsection 3.1.3, “Work Folders and Online Program Files,” for explanations about the user file folder.

2 Click the <Next> button. The [Import/Export -- Specify export file name] screen appears.

2-1 Specify an export-to file. If the type of a file to be exported is a user file, specify the export-to folder.
If the FAPT LADDER-III file (*.LAD) is selected as a file to be exported file in step 2, above

3 Click the <Next> button.
The [Import/Export -- Select Data File, Ladder Diagram, Subprogram, and/or User File] screen appears.

3-1 Select the files you want to export.

4 Click the <Finish> button.
The message “Export file data will be replaced/Added, Are you sure?” appears.

5 To quit exporting, click the <Cancel> button on the [Import/Export -- Select Data File, Ladder Diagram, Subprogram, and/or User File] screen.
If a memory format file, ROM format file, or Handy file format file is selected as the type of file to be exported in step 2, above
3 Click the <Finish> button.
   The message “Succeed Change Data” appears.

![Image](image)

Fig. 3.11.1 (e)

Click the <OK> button.

If a user file is selected as the type of file to be exported in step 2, above
3 Click the <Finish> button.
   The [Import/Export -- Select Data File, Ladder Diagram, Subprogram, and/or User File] screen appears.

![Image](image)

Fig. 3.11.1 (f)

3-1 Select the user files you want to export.
4 Click the <Finish> button.
The message “Export file data will be replaced/Added, Are you sure?” appears.

To export, click the <Yes> button.
To quit exporting, click the <No> button.
This chapter describes how to print a sequence program, which consists of a title, system parameters, symbols, comments, I/O modules, messages, ladders and step sequences.
4.1 PRINTING TITLES

This section describes how to print title data.

4.1.1 Procedure

![Fig. 4.1.1 (a)](image)

1-1 Select Title Data from Print Data.
1-2 Click the <Option> button. The [Option] screen appears.

![Option Screen](image)

Fig. 4.1.1 (b)

2 Set the following print options on the Title tab.

- **Page No.**
  Specify a start page number for title printing (the Initially value is 1).

- **Title**
  Specify a title to be printed (the Initially value is "Title Data").

- **Sub Title**
  Specify a subtitle to be printed (the Initially value is blank).

3 To preview title printing, click the <Preview> button.

4 To set up the print options, click the <OK> button.
   To cancel the setup of the print options, click the <Cancel> button.
   The [Print] screen appears again.

5 To print, click the <OK> button.
   To quit without printing, click the <Cancel> button.
4.2 PRINTING LADDER DIAGRAMS

This section describes how to print ladder diagrams.

4.2.1 Procedure

   ![Print Screen]

   1-1 Select Ladder Diagram from Print Data.
1-2 Click the <Option> button. The [Option] screen appears.

![Fig. 4.2.1 (b)](image)

2 Set up the following print options on the Ladder Diagram tab.

**Page No.**
Specify a start page number for ladder diagram printing (the Initially value is 1).

**Title**
Specify a title for ladder diagram printing (the Initially value is "Ladder Diagram").

**Sub Title**
Specify a subtitle for ladder diagram printing (the Initially value is blank).

**Print Range**
Specify the range of ladder diagrams to be printed (the Initially value is <All>).
- **All:** All ladder diagrams will be printed.
- **Net No.:** The ladder diagrams in the specified nets will be printed.
- **Page No.:** The ladder diagrams on the specified pages will be printed.
Print Program
Specify the ladder programs you want to print (the Initially value is <All>).
All: All programs (including subprograms) will be printed.
Unit: Enter the name of the subprogram you want to print, or select it from the combo box.

Page Feed (Sub Program) (Initially not selected.)

To preview ladder diagram printing, click the <Preview> button.

To specify ladder diagram printing in detail, click the <Details> button.

Fig. 4.2.1 (c)

Step No. (Initially selected.)
Net No. (Initially selected.)
Hide Line No. (Initially not selected.)

Line Spacing
Specify line spacing for nets (the Initially value is <Narrow>).

Relay/Coil
Specify the data to be printed at a contact (the Initially value is <Symbol>).
Symbol: Symbol data for contacts will be printed.
Relay Comment: Data for relay comments will be printed.
Cross Reference (Initially not selected.)

5 To set up the print options, click the <OK> button. To cancel the setup of the print options, click the <Cancel> button. The [Print] screen appears again.

6 To print, click the <OK> button. To quit without printing, click the <Cancel> button.
4.3 PRINTING STEP SEQUENCES

This section describes how to print step sequences.

4.3.1 Procedure

![Fig. 4.3.1 (a)](image)

1-1 Select Step Sequence Diagram from Print Data.

If the PMC model does not support step sequences, or if there is no step sequence, this item is not displayed.
1-2 Click the <Option> button. The [Option] screen appears.

2 Set up the following print options on the Step Sequence Diagram tab.
   
   **Page No.**
   Specify a start page number for step sequence printing (the Initially value is 1).

   **Title**
   Specify a title for step sequence printing (the Initially value is "Step Sequence Diagram").

   **Sub Title**
   Specify a subtitle for step sequence printing (the Initially value is blank).

   **Print Program**
   Specify the step sequence programs you want to print (the Initially value is <All>).
   All: All programs (including subprograms) will be printed.
   Unit: Enter the name of the subprogram you want to print, or select it from the combo box.

   **Sub Program No.** (Initially selected.)

3 To preview step sequence program printing, click the <Preview> button.
4  To set up the print options, click the <OK> button.
   To cancel the setup of the print options, click the <Cancel> button.
   The [Print] screen appears again.

5  To print, click the <OK> button.
   To quit without printing, click the <Cancel> button.
4.4 PRINTING SYMBOLS AND COMMENTS

This section describes how to print symbols and comments.

4.4.1 Procedure

   ![Print Screen](image)

   **Fig. 4.4.1 (a)**

   1-1 Select Symbol & Comment from **Print Data**.
1-2 Click the <Option> button. The [Option] screen appears.

Fig. 4.4.1 (b)

2 Set up the following print options on the Symbol tab.

Page No.
Specify a start page number for symbol printing (the Initially value is 1).

Title
Specify a title for symbol printing (the Initially value is "Symbol & Comment").

Sub Title
Specify a subtitle for symbol printing (the Initially value is blank).

Print Range
Specify the range of symbols to be printed (the Initially value is <All>).
All: All the symbols will be printed.
Line No.: The symbols on the specified lines will be printed.
Page No.: The symbols on the specified pages will be printed.

Comment
Specify the type of comment you want to print (the Initially value is <Relay Comment>).
Relay Comment: A relay comment will be printed.
Coil Comment: A coil comment will be printed.
Relay Comment/Coil Comment: Relay and coil comments will be printed.
3 To preview symbol printing, click the <Preview> button.

4 To set up the print options, click the <OK> button.
   To cancel the setup of the print options, click the <Cancel> button.
   The [Print] screen appears again.

5 To print, click the <OK> button.
   To quit without printing, click the <Cancel> button.
4.5 PRINTING MESSAGES

This section describes how to print messages.

4.5.1 Procedure

   ![Print Screen](image)

   **Fig. 4.5.1 (a)**

1-1. Select Message Data from Print Data.
1-2 Click the <Option> button. The [Option] screen appears.

![Fig. 4.5.1 (b)](image)

2 Set up the following print options on the Message tab.

- **Page No.**
  Specify a start page number for message printing (the Initially value is 1).

- **Title**
  Specify a title for message printing (the Initially value is "Message").

- **Sub Title**
  Specify a subtitle for message printing (the Initially value is blank).

- **Print Range**
  Specify the range of messages to be printed (the Initially value is <All>).
  - All: All the messages will be printed.
  - Address: The messages in the specified address range will be printed.
  - Page No.: The messages on the specified pages will be printed.

3 To preview message printing, click the <Preview> button.

4 To set up the print options, click the <OK> button.
   To cancel the setup of the print options, click the <Cancel> button.
   The [Print] screen appears again.
5 To print, click the <OK> button.
To quit without printing, click the <Cancel> button.
4. PRINTING SEQUENCE PROGRAMS

4.6 PRINTING I/O MODULE ASSIGNMENT

This section describes how to print I/O module assignments.

4.6.1 Procedure

![Print Screen](image)

**Fig. 4.6.1 (a)**

1-1. Select I/O Module Data from **Print Data**.
1-1 Click the <Option> button. The [Option] screen appears.

![Option Screen](image)

2 Set up the following print options on the I/O Module tab.

   **Page No.**
   Specify a start page number for I/O module printing (the Initially value is 1).

   **Title**
   Specify a title for I/O module printing (the Initially value is "I/O Module").

   **Sub Title**
   Specify a subtitle for I/O module printing (the Initially value is blank).

   **1 Channel** (Initially selected.)
   (This item is to be set if the PMC model is PMC-QC.)

   **2 Channel** (Initially selected.)
   (This item is to be set if the PMC model is PMC-QC.)

3 To preview I/O module printing, click the <Preview> button.

4 To set up the print options, click the <OK> button.
   To cancel the setup of the print options, click the <Cancel> button.
   The [Print] screen appears again.

5 To print, click the <OK> button.
   To quit without printing, click the <Cancel> button.
4.7 PRINTING SYSTEM PARAMETERS

This section describes how to print system parameters.

4.7.1 Procedure

![Print Screen]

Fig. 4.7.1 (a)

1-1 Select System Parameter from Print Data.
1-2 Click the <Option> button. The [Option] screen appears.

2 Set up the following print options on the System Parameter tab.

   **Page No.**
   Specify a start page number for system parameter printing (the Initially value is 1).

   **Title**
   Specify a title for system parameter printing (the Initially value is “System Parameter”).

   **Sub Title**
   Specify a subtitle for system parameter printing (the Initially value is blank).

3 To preview system parameter printing, click the <Preview> button.

4 To set up the print options, click the <OK> button.
   To cancel the setup of the print options, click the <Cancel> button.
   The [Print] screen appears again.

5 To print, click the <OK> button.
   To quit without printing, click the <Cancel> button.
4.8 PRINTING CROSS-REFERENCES

This section describes how to print cross-references.

4.8.1 Procedure

![Print Screen with Cross Reference Option]

1-1 Select Cross Reference from Print Data.
1-2 Click the <Option> button. The [Option] screen appears.

![Option Screen](image)

Fig. 4.8.1 (b)

2 Set up the following print options on the Cross Reference tab.

**Page No.**
Specify a start page number for cross-reference printing (the Initially value is 1).

**Title**
Specify a title for cross-reference printing (the Initially value is "Cross Reference").

**Sub Title**
Specify a subtitle for cross-reference printing (the Initially value is blank).

**Print Range**
Specify the range of cross-references to be printed (the Initially value is <All>).
- All: All the cross-references will be printed.
- Address: The cross-references in the specified address range will be printed.
- Address Kind: Cross-references at addresses of the specified type will be printed (multiple address types can be selected).

**Guidance**
Specify the type of output format guidance (the Initially value is "STEP NO./NET NO.").
Sub Guidance
Specify the type of output format subguidance (the Initially value is blank).

Page Feed  (Initially selected.)

Line Feed Count
Specify the number (0 to 9) of blank lines to be placed between addresses (the Initially value is 1).

3 To preview cross-reference printing, click the <Preview> button.

4 To specify cross-reference printing in detail, click the <Details> button.

![Fig. 4.8.1 (c)](image)

**Step No.**  (Initially selected.)

**Net No.**  (Initially selected.)

**Print No. Type**  (The Initially value is "Step No. /Net No.").

**Comment**
Specify the type of comment you want to print (the Initially value is <Relay Comment>).
4. PRINTING SEQUENCE PROGRAMS

Double Check  (Initially not selected.)
Specify whether to check for duplicate coil writing and
duplicate use of the coil write function instruction.

Coil Guidance
(The Initially value is <Ladder Diagram Graphics>.)

Ladder Diagram Graphics
The same graphics as those for ladder diagram printing will
be used.

User Define String
User-defined character strings will be used for printing.
User-defined character strings can be set up for the
following four items (up to 13 characters for each).

  Read: Specify a character string for displaying read
references. (The Initially value is "Read.")
  Write: Specify a character string for displaying write
references. (The Initially value is "Write.")
  Set: Specify a character string for displaying set
references. (The Initially value is "Set.")
  Reset: Specify a character string for displaying reset
references. (The Initially value is "Reset.")

5  To set up the print options, click the <OK> button.
  To cancel the setup of the print options, click the <Cancel> button.
  The [Print] screen appears again.

6  To print, click the <OK> button.
  To quit without printing, click the <Cancel> button.
4.9 PRINTING BIT ADDRESS MAPS

This section describes how to print bit address maps.

4.9.1 Procedure

Fig. 4.9.1 (a)

1-1 Select Bit Address Map from Print Data.
1-2 Click the <Option> button. The [Option] screen appears.

2 Set up the following print options on the Bit Address Map tab.
   
   **Page No.**
   Specify a start page number for bit address map printing (the Initially value is 1).

   **Title**
   Specify a title for bit address map printing (the Initially value is "Bit Address Map").

   **Sub Title**
   Specify a subtitle for bit address map printing (the Initially value is blank).

   **Print Range**
   Specify the range of bit address maps to be printed (the Initially value is <All>).
   - **All**: All bit address maps will be printed.
   - **Address**: The bit map addresses in the specified address range will be printed.
   - **Address Kind**: Bit map addresses at addresses of the specified type will be printed (multiple address types can be selected).

   - **Using Address** (Initially selected.)

   - **Page Feed** (Initially selected.)
Use Address (The Initially value is "@").
Any symbol (one character) can be specified as the address symbol to be used.

3 To preview bit address map printing, click the <Preview> button.

4 To set up the print options, click the <OK> button.
To cancel the setup of the print options, click the <Cancel> button.
The [Print] screen appears again.

5 To print, click the <OK> button.
To quit without printing, click the <Cancel> button.
4.10 SETTING UP COMMON OPTIONS

This section describes how to set up options common to all print items.

4.10.1 Procedure

1. Set up the following common options.
   - **Guidance Message Language**
     Specify the language for guidance messages used when titles and system parameters are printed.
     (The Initially value is <First Language>.)

   - **First Language**
     Specify a title for bit address map printing (the Initially value is <English>).

   - **Second Language**
     This item can be specified if <First/Second Language> is selected for Guidance Message Language (the Initially value is <English>).

   - **Cover**
     (Initially not selected.)
     If this item is selected (the check mark is on), a meta file can be specified for the cover.

2. To set up the print options, click the <OK> button.
   To cancel the setup of the print options, click the <Cancel> button.
   The [Print] screen appears again.
4.11 SAVING AND READING OPTION FILE

This section describes how to save the print options you set up to a file and how to read them from the file when printing.

4.11.1 Procedure

![Fig. 4.11.1 (a)](image)

2. To save the options to a file, click the <Save Option File> button.

2-1 The [Save As] screen appears.

![Fig. 4.11.1 (b)](image)
2-2 Specify a File name.

2-3 Click the <Save> button.

3 To read options from a file, click the <Restore Option File> button.

3-1 The [Open] screen appears.

3-1 Specify a File name.

3-2 Click the <Open> button.
4.12 SETTING UP PRINTER

This section describes how to set up a printer.

4.12.1 Procedure

![Fig. 4.12.1 (a)](image)

2. Click the <Printer> button.

2-1. The [Printer] screen appears.

![Fig. 4.12.1 (b)](image)
2-2 Specify a printer name in [Name].
   If more than one printer has been installed in your system, one can be selected from the drop-down list box.

2-3 To set the displayed printer, click the <OK> button.
   To cancel the setup of the printer, click the <Cancel> button.
4.12.2 Setting up Pages

1. On the [Printer] screen, click the Page button.

2. Set the items on each tab.

2-2 [Line Count] tab

**Line Count**
Specify the maximum number of lines that can be printed on one page. A value can be entered directly. It can also be selected by clicking the up/down arrows. (The Initially value is 72.)

**Char Point**
Specify the character spacing, in points. A value can be entered directly. It can also be selected by clicking the up/down arrows. The font size may be adjusted automatically according to the specified character spacing. (The Initially value is 9.)

**Line Point**
Specify the line spacing, in points. A value can be entered directly. It can also be selected by clicking the up/down arrows. The number of lines and the font size may be adjusted automatically according to the specified line spacing. (The Initially value is 9.)

**Font Face**
Specify the font you want to use. (The Initially value is <Courier New>.)
Font Size
Specify the font size you want to use. The number of lines, character spacing, and line spacing may be adjusted automatically according to the specified font size.
(The Initially value is 9.)

<Reset> button
This button clears the settings of all the items on the [Line Count] tab to the respective Initially values.

2-1 [Line Count (Ladder)] tab

Line Count
Specify the maximum number of lines that can be printed on one page. A value can be entered directly. It can also be selected by clicking the up/down arrows. The line spacing and font size may be adjusted automatically according to the specified number of lines.
(The Initially value is 78.)

Char Point
Specify the character spacing, in points. A value can be entered directly. It can also be selected by clicking the up/down arrows. The font size may be adjusted automatically according to the specified character spacing.
(The Initially value is 8.)
**Line Point**
Specify the line spacing, in points. A value can be entered directly. It can also be selected by clicking the up/down arrows. The number of lines and the font size may be adjusted automatically according to the specified line spacing.
(The Initially value is 8.)

**Ladder Data**
Specify the ladder data for which you want to specify a font.

**Font Face**
Specify the name of the font you want to use for an item specified in Ladder Data.
(The Initially value is <Courier New>.)

**Font Size**
Specify the font size you want to use for an item specified in Ladder Data. The number of lines, character spacing, and line spacing may be adjusted automatically according to the specified font size.
(The Initially value is 8.)

**<Reset> button**
This button clears the settings for all the items on the [Line Count (Ladder)] tab to the respective Initially values.
2-3 [Margin] tab

**Upper**
Specify the top margin for each page. A value can be entered directly. It can also be selected by clicking the up/down arrows. The entered value is assumed to be in mm.
(The Initially value is 20.)

**Under**
Specify the bottom margin for each page. A value can be entered directly. It can also be selected by clicking the up/down arrows. The entered value is assumed to be in mm.
(The Initially value is 10.)

**Right**
Specify the right margin for each page. A value can be entered directly. It can also be selected by clicking the up/down arrows. The entered value is assumed to be in mm.
(The Initially value is 10.)

**Left**
Specify the left margin for each page. A value can be entered directly. It can also be selected by clicking the up/down arrows. The entered value is assumed to be in mm.
(The Initially value is 10.)
2-4 [Paper Size] tab

Size
Specify the size of the form you want to use.
(The Initially value is <A4>.)

2-5 [Print Type] tab

Frame Print
Specify whether to print a frame. The following items can be set up only when this item is selected.

File
Specify the meta file you want to use for frame printing. The <File> button lets you select a file name.
4. PRINTING SEQUENCE PROGRAMS

Data
Specify the data for which you want to set up a character string, coordinate values, and font.

String
Specify a character string set up in Data as print data. Data can be specified in the following data formats.
- [%T]: Title data will be printed.
- [%S]: Subtitle data will be printed.
- [%P]: A program name will be printed.
- [%N]: Page numbers will be printed.

(Initially values)
- Character definition 1: %P
- Character definition 2: %T
- Character definition 3: %N
- Character definition 4: %S
- Character definition 5: Unavailable

X Pos
Specify the print start position (X-coordinate) for a character string set up in Data. A value can be entered directly. It can also be selected by clicking the up/down arrows. The entered value is assumed to be in mm.

(Initially values)
- Character string definition 1: 10
- Character string definition 2: 75
- Character string definition 3: 180
- Character string definition 4: 75
- Character string definition 5: 0

Y Pos
Specify the print start position (Y-coordinate) for a character string set up in Data. A value can be entered directly. It can also be selected by clicking the up/down arrows. The entered value is assumed to be in mm.

(Initially values)
- Character string definition 1: 10
- Character string definition 2: 10
- Character string definition 3: 10
- Character string definition 4: 15
- Character string definition 5: 0

Font Face
Specify the name of the font you want to use to print the data set up in Data.
(Initially value is <Courier New>.)
Specify the font size you want to use to print the data set up in Data.
(The Initially value is 12.)

2-6 To use the entered page settings, click the <OK> button.
To cancel the page settings, click the <Cancel> button.
This chapter describes how to compile and decompile source programs, as well as automatic compilation and automatic decompilation. The chapter also describes how to protect a ladder program using a password.

- **Compilation**
  Compilation involves converting an edited source program to object code that can be executed by the PMC. Unless source programs are compiled, online functions cannot be used and the source programs cannot be transferred to RAM of the PMC.

- **Decompilation**
  Decompilation involves converting object code to a source program. Data items uploaded from the PMC, and data items read from ROM and a memory card become object code. Since object code can neither be edited nor printed offline, you must decompile object code.

**NOTE**
To decompile an object code with a password, enter the password first.
5.1 COMPILATION

This section describes how to compile source programs.

Procedure

2. Click the [Option] tab to set the compile options.
The details of the options are listed below.

<table>
<thead>
<tr>
<th>Option</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Compiled in the Condensation mode</td>
<td>When a ladder that has the same number of steps is compiled, the object code is decreased.</td>
</tr>
<tr>
<td>The Symbol/Coilcomment has been output</td>
<td>A symbol (six bytes or less) that can be displayed on a CRT and MDI, and an accompanying coil comment are output to an object code.</td>
</tr>
<tr>
<td>The Netcomment pointer has been output</td>
<td>A net comment pointer is output to an object code.</td>
</tr>
<tr>
<td>Repetition check of Function instruction number</td>
<td>Functions TMR, TMRB, CTR, DIFU, and DIFD are checked if they are duplicated. If any, a warning is displayed.</td>
</tr>
<tr>
<td>Setting of Password</td>
<td>A password is added to an object code. Enter a password at the start of execution.</td>
</tr>
</tbody>
</table>

3 To start compilation, click the <Exec> button. When [Setting of Password] in the compile option is checked, the [Password(Compile)] dialog appears. Enter a password, then click the <OK> button.
(For details of passwords, see Section 7.4, "Protecting Ladder Programs by Passwords.")
4 While data is being compiled, the progress of the processing appears on the screen. When completed, the number of errors and warnings appears.

NOTE

1 Condense mode
Condense mode has the following advantages.
- Reduced compilation time.
- Reduced transfer time from a personal computer to the PMC.
- The mode requires little ROM space.
On the other hand, the following restrictions must be observed:
- When data is edited by an integrated edit function, and if a ladder or symbol is added, overlapping with the C language area might occur. Pay careful attention to this point.

2 Net comment pointer
The net comment contains string information only in a source program. The compiled object code does not include the net comment information. Therefore, the setting to output the "net comment pointer" (position information of a net comment) as a function NOP to object code was developed. This position information enables the net comment to be restored at decompilation after a ladder is modified by online editing.
5.2 DECOMPILATION

This section describes how to decompile object code.

Procedure

2. Click the [Option] tab to set the decompile options.
Details of the options are listed below.

<table>
<thead>
<tr>
<th>Option</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Symbol/ Comment is not Merge</td>
<td>The contents of the existing source program are all discarded and overwritten with the contents of an object code.</td>
</tr>
<tr>
<td>Merging the Symbol/ Comment has given priority to the Source data</td>
<td>The symbols of the source program and object code are merged only for a symbol and comment. If the same symbol and comment exist, the definition of the source program is used.</td>
</tr>
<tr>
<td>Merging the Symbol/ Comment has given priority to the Memory card data</td>
<td>The symbols of the source program and object code are merged only for a symbol and comment. If the same symbol and comment exist, the definition of the source program is used.</td>
</tr>
</tbody>
</table>
3 To start decompilation, click the <Exec> button. When object code with a password is to be decompiled, the [Password(Decompile)] dialog appears. Enter a password to permit display or to permit display and editing, and then click the <OK> button. (For details on passwords, see "Protecting Ladder Programs by Passwords.")

Fig. 5.2 (c)

![Password(Decompile) dialog](Fig. 5.2 (c))

Fig. 5.2 (d)

![Password(Read/Write) dialog](Fig. 5.2 (d))
4 Once decompilation is complete, the number of errors and warnings appears.

**NOTE**

Password

- The password to be entered differs depending on the type of the password added to an object code.
  - To permit display → Enter the password to permit display
  - To permit display and editing → Enter a password to permit display and editing
  - Both → Enter a password to permit display and editing
5.3 AUTOMATIC COMPILATION AND DECOMPILATION

This section describes automatic compilation and decompilation.

The automatic compilation or decompilation processing is performed when the mode is switched between offline and online so that a source program in a sequence program (LAD file) is consistent with the object code (memory card-formatted data).

- **Execution condition of automatic compilation**
  Select [Ladder] - [Online/Offline]. When the mode is switched from offline to online, a source program is compiled automatically under one of the following conditions.
  - When a source program (such as a title or ladder) is changed
  - When a source program is imported
  - When a source program is not compiled after a sequence program is created
  - When the time stamp of memory card-formatted data is older than that of any data in a source program (when data is converted)

- **Execution condition of automatic decompilation**
  Select [Ladder] - [Online/Offline]. When the mode is switched from online to offline, object code is decompiled automatically under one of the following conditions.
  - When memory card-formatted data is loaded from the PMC
  - When a memory card-formatted file is imported
  - When a Handy File-formatted file is imported
  - When a ROM-formatted file is imported
  - When online editing is executed
  - When the time stamp of any data in a source program is older than that of memory card-formatted data (when data is converted)

**NOTE**
Setting options for automatic compilation or decompilation
(1) Compile option
   - Select [Tool] - [Option].
   - Click the [Compile] tab for setting.
(2) Decompile option
   - Select [Tool] - [Option].
   - Click the [Decompile] tab for setting.
5.4 PROTECTING LADDER PROGRAMS BY PASSWORDS

This section describes the protection of a ladder program.

Adding a password to an object code prevents a ladder program from being displayed or edited on a CRT or MDI.

- How to create object code with a password
  1. Select [Tool] - [Compile].
  2. Click the [Option] tab, then select [Setting of Password].
  3. Click the <Exec> button.
  4. When the [Password(Compile)] dialog appears, enter a password.
  5. Click the <OK> button. Then, object code with the entered password is created.

**NOTE**

Entering a password
1. A password must consist of no more than eight alphanumeric characters.
2. Passwords are not case-sensitive. (A lower-case letter is regarded as an upper-case letter.)
3. A space, kana character, kanji character, and special character (for example, *, #, and @) cannot be used.
4. There are combinations of characters, which cannot be used in some rare cases. (An error message appears.) In this case, enter another string.
5.4.1 Partial Protect Functions

This subsection describes the partial protect function.

Using a special password to permit display and editing enables the subprogram area to be divided into a protection area and non-protection area, as well as enabling a ladder program to be partially protected. An object code with a special password is created in the same way as an object code with a normal password, except for using the special password to permit display and editing.

- **Special password**
  A special password begins with #.
  (Except for its beginning with #, a special password is no different from a normal password.)

  Example of a special password:  #FANUC

- **Protection area and non-protection area**
  A subprogram number identifies the protection area and non-protection area.

<table>
<thead>
<tr>
<th>Main program</th>
<th>Subprogram</th>
<th>Protection area</th>
</tr>
</thead>
<tbody>
<tr>
<td>LEVEL1</td>
<td>P1 to P1499</td>
<td></td>
</tr>
<tr>
<td>LEVEL2</td>
<td>P1500 to P2000</td>
<td>Protection area</td>
</tr>
<tr>
<td>LEVEL3</td>
<td>Non-protection area</td>
<td></td>
</tr>
</tbody>
</table>

- **Applied model**
  PMC-SB4(STEP)/SC4(STEP)/SB6(STEP)/
  SB6(STEP,IO-2)/NB2(STEP)

**NOTE**
Object code with a special password can be decompiled without entering a password. In this case, only a subprogram in the non-protection area (P1500 or later) can be displayed, edited, and printed. When compiled, [Setting of Password] in the compile option is ignored and an object code is created by using a special password added to the object code. This enables only the non-protection area to be changed while a ladder program created by a machine manufacturer is protected.
This chapter describes how to convert a source program to a mnemonic file, and vice versa, as well as the mnemonic file format.
6.1 CONVERTING SOURCE PROGRAMS TO MNEMONIC FILES

This section describes the procedure for converting a source program to a mnemonic file that can be edited with a text editor.

Procedure

2. Enter a mnemonic file name in [Mnemonic File].

3. Select [Convert Data Kind]. The following items can be selected:

<table>
<thead>
<tr>
<th>Table 6.1 (a)</th>
</tr>
</thead>
<tbody>
<tr>
<td>ALL</td>
</tr>
<tr>
<td>System Parameter</td>
</tr>
<tr>
<td>Title</td>
</tr>
<tr>
<td>Symbol Comment</td>
</tr>
<tr>
<td>Ladder</td>
</tr>
<tr>
<td>I/O Module</td>
</tr>
<tr>
<td>Message</td>
</tr>
</tbody>
</table>
4 Select [Selection Item]. The following items can be selected:

<table>
<thead>
<tr>
<th>Table 6.1 (b)</th>
</tr>
</thead>
</table>
| **P-G Compatible** | Converts data to data in the format output by P-G.  
| | Converts Japanese messages to code-formatted data. |
| **Full Options** | Converts comments in which kanji characters are included in the comment data.  
| | Converts data in which the symbol and comment for an address as well as the function name of a function are used as comments.  
| | Converts data that has an instruction part, operand part, and comment part.  
| | Converts Japanese messages to Japanese-formatted data. |
| **Label/Subprogram** | Converts data with the jump addresses (labels) of functions (JMPB, JMPC, CALL, SP commands) used in a subprogram highlighted. However, the step number of mnemonic data after conversion is different from the other settings. (The function part used in a subprogram is different.)  
| | Converts Japanese messages to Japanese-formatted data. |

5 To convert a source program to a mnemonic file, click the <OK> button. Once the conversion is completed, the conversion results appear.  
(To see the last converted results, click the <Log File> button.)

**NOTE**  
For conversion to a mnemonic program, a step sequence subprogram is not converted.
6.2 CONVERTING MNEMONIC FILES TO SOURCE PROGRAMS

This section describes the procedure for converting a mnemonic file edited by a text editor to a source program in accordance with a certain format.

Procedure

   ![Fig. 6.2](image)

2. Enter a mnemonic file name in [Mnemonic File Name].

3. To convert a mnemonic file to a source program, click the <OK> button.
   Once the conversion is complete, the conversion results appear.
   (To see the most recently converted results, click the <Log File> button.)

**NOTE**

For conversion to a source program, the source program of the currently open sequence program is changed but is not stored, however.
6.3 MNEMONIC FILE FORMAT

This section describes the mnemonic file format.

- Identification code
  For a mnemonic file, data is defined using one of four types of identification code, beginning with %.

<table>
<thead>
<tr>
<th>Identification code</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>%@A</td>
<td>Start of ALL-format data</td>
</tr>
<tr>
<td>%@E</td>
<td>End of ALL-format data</td>
</tr>
<tr>
<td>%@0 to %@5</td>
<td>Start of each single-format data</td>
</tr>
<tr>
<td>%@0:</td>
<td>System parameter</td>
</tr>
<tr>
<td>%@1:</td>
<td>Title</td>
</tr>
<tr>
<td>%@2:</td>
<td>Symbol and comment (FORMAT-A/B)</td>
</tr>
<tr>
<td>%@2-C:</td>
<td>Symbol and comment (FORMAT-C)</td>
</tr>
<tr>
<td>%@3</td>
<td>Ladder</td>
</tr>
<tr>
<td>%@4:</td>
<td>Message</td>
</tr>
<tr>
<td>%@5:</td>
<td>I/O module</td>
</tr>
<tr>
<td>Only %</td>
<td>End of each single-format data</td>
</tr>
</tbody>
</table>

- Line feed code
  LF (0AH) is used as the line feed code.
  CR (0DH) is ignored.

- Delimiter

  | ; (Semicolon) | This is used in ladder data.  
  |              | - This is used in the ladder data part to delimit ladder data and a comment statement. Data after ";" is regarded as being a comment statement. Consequently, when a mnemonic file is converted to a source program, data after ";" is not converted but deleted. |

  | : (Colon)     | This is used in ladder data and I/O module data.  
  |              | - This is used in the ladder data part to delimit net numbers and ladder data. Data before ";:" is regarded as being net numbers.  
  |              | - This is used in the I/O module data part to delimit channel numbers and I/O module data. Data before ";:" is regarded as being channel numbers. |
6. MNEMONIC EDITING

- Control character
  In a mnemonic file, a dollar sign ("$") is used as the control character.
  When a dollar sign is used in a string, describe "$$."

(1) Symbol and comment data
   - Specifying address and symbol
     Describe an address and symbol on the same line. At the beginning of a line, describe an address, use a half-size space or tab as a delimiter, and then describe a symbol.

   R0200.0 UNIT-3-POWER
   Address  Symbol
   Half-size space or tab

   - Specifying a relay comment and coil comment
     Describe a relay comment and coil comment after the specification of an address described in (1). A string enclosed in the first single quotation marks "" after "$1" is a relay comment. A string enclosed in the second single quotation marks is a coil comment.

     $1 'KEEPPOWERON' 'KEEPPOWERON'
     Relay comment  Coil comment
     Half-size space or tab
     Mark that represents comment data (always '1')

     When you do not use a relay comment, describe a pair of single quotation marks for the relay comment part.

     $1 ' INITIALIZE OF SEQUENCE'

NOTE

When you use a single quotation mark "" in a string of a relay comment or coil comment, describe a dollar sign plus a single quotation mark "$" + "."
(2) Ladder data
   - Starting and ending a net comment
     Describe a net comment with "(" , " ")" in a ladder
     mnemonic.

<table>
<thead>
<tr>
<th>Description</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;(*)</td>
<td>Start of a net comment</td>
</tr>
<tr>
<td>&quot;*&quot;</td>
<td>End of a net comment</td>
</tr>
</tbody>
</table>

- Specifying the position of a form feed character
  (printing a ladder diagram)
  To specify the position of a form feed character to
  print a ladder diagram, describe "$P" in a net
  comment.

<table>
<thead>
<tr>
<th>Description</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>$P or #p</td>
<td>Specification of position of form feed character (printing ladder diagram)</td>
</tr>
</tbody>
</table>
6.4 MNEMONIC FILE SAMPLE

This section provides examples of mnemonic files for the single format and All format.

6.4.1 Single Format

This section shows a sample file for each single-format data.

6.4.1.1 Parameter

<table>

This chapter describes how to load and store programs.

**NOTE**

1. When input or output (loading data from the PMC or storing data to the PMC) is performed during NC operation, the speed at which data (such as positions) is displayed on an NC screen may fall. This does not, however, affect NC operation. It is recommended that input or output be performed while the NC is not being operated.

2. While a screen created by the C executor is displayed, the communication speed falls. It is recommended that, after moving to another screen such as the position display screen, input or output (loading data from the PMC or storing data to the PMC) be performed.
7.1 LOADING SEQUENCE PROGRAMS FROM THE PMC (DURING DISCONNECTION WITH THE PMC)

7.1.1 Procedure

![Program transfer wizard](image)

**Fig. 7.1.1(a)**

1-1 Select a transfer method.

- **<I/O by MONIT-ONLINE function>**
  A communication function by an online monitor is used.

- **<I/O by “I/O” key operation>**
  Input or output is performed by the HOST operation of an I/O function.
♦ <I/O by MONIT-ONLINE function>

2 Select <I/O by MONIT-ONLINE function>, and then click the <Next> button. The following message appears.

![Image of Ladder Editing Package (Windows)](Fig. 7.1.1(b))

3 To display the [Communication] screen to start access to the PMC, click the <Yes> button.

![Image of Communication screen](Fig. 7.1.1(c))

4 When there is a loader, the [Communication Current Device] screen appears. Select either CNC Main or LOADER, and then click the <Exec> button.

![Image of Communication with Current Device] (Fig. 7.1.1(d))
5 The [Program transfer wizard Selection of loading/store] screen appears. Click the <Next> button.

Fig. 7.1.1(e)

6 The [Program transfer wizard Selection of program] screen appears.

Fig. 7.1.1(f)

7 For the remainder of the procedure, see Section 7.2, "Loading Sequence Programs from the PMC (During Connection with the PMC)."

- 186 -
7. INPUT/OUTPUT

♦ <I/O by “I/O” key operation>

2 Select <I/O by “I/O” key operation>, and then click the <Next> button. The [Program transfer wizard Selection of loading/store] screen appears.

![Fig. 7.1.1(g)](image)

3 Click the <Next> button. The [Program transfer wizard Selection of program] screen appears.

![Fig. 7.1.1(h)](image)

4 Select LADDER or ALL, and then click the <Next> button.
5 The [Program transfer wizard Setting of communication] screen appears.
Set a communication protocol, and then click the <Next> button.

![Fig. 7.1.1(i)](image)

6 The [Program transfer wizard Confirmation of processing] screen appears.

![Fig. 7.1.1(j)](image)
7 Click the <Finish> button. Then, the [Execution of I/O transfer] screen appears.

![Execution of I/O transfer](image)

**NOTE**
Set CHANNEL, DEVICE, FUNCTION, and DATA KIND on the PMC I/O PROGRAM screen of the PMC in advance. Set HOST for DEVICE. For details of the settings, refer to the FANUC PMC Ladder Language Programming Manual (B-61863E). Press soft key <EXEC> of the NC to place the NC in standby.

8 Once I/O transfer is complete, the following message appears.

![Ladder Editing Package (Windows)](image)
7.2 LOADING SEQUENCE PROGRAMS FROM THE PMC (DURING CONNECTION WITH THE PMC)

7.2.1 Procedure

![Fig. 7.2.1(a)](image)

NOTE
When connection is not established, the [Communication] screen appears. Then, establish connection.

1-1 Set data.

   **Content of transfer**

As transfer information, a selection can be made from Ladder, Language program, and PMC Parameter. When transferring PMC parameters, enter a transfer destination file name in [Selection of]. The initial setting specifies that PMC parameters are transferred to PMC_PRM.PRM in a user file folder. For a user file folder, see Subsection 3.1.3, "Work Folders and Online Program Files.

A PMC parameter file once transferred to a user file folder can be restored by using the export function. For the export function, see Section 3.15, "EXPORTING PROGRAMS."
Only a language program can only be stored.

1-2 Click the <Next> button. The [Program transfer wizard Confirmation of processing] screen appears.

1-3 Check the setting items. Click the <Finish> button. Then, the [Transfer monitor] screen appears, and then the program is transferred.
7.3 STORING SEQUENCE PROGRAMS IN THE PMC (DURING CONNECTION WITH THE PMC)

7.3.1 Procedure

1. Select [Tool] - [Store to PMC].
   The [Program transfer wizard] screen appears.
   
   ![Program transfer wizard screen]

   **Fig. 7.3.1(a)**

1-1 Selection of transferred method.
   - <I/O by MONIT-ONLINE function>
     A communication function by an online monitor is used.
   - <I/O by “I/O” key operation>
     An input or output is performed by the HOST operation of an I/O function.
♦ \textit{<I/O by MONIT-ONLINE function>}

2. Select \textit{<I/O by MONIT-ONLINE function>}, and then click the \textit{<Next>} button. The following message appears.

![Fig. 7.3.1(b)]

3. Click the \textit{<Yes>} button. The \textit{[Communication]} screen appears, after which access to the PMC is started.

![Fig. 7.3.1(c)]

4. When there is a loader, the \textit{[Communication \ Current Device]} screen appears. Select CNC Main or LOADER, and then click the \textit{<Exec>} button.

![Fig. 7.3.1(d)]
5 The [Program transfer wizard Selection of loading/store] screen appears. Click the <Next> button.

![Fig. 7.3.1(e)](image)

6 The [Program transfer wizard Selection of program] screen appears.

![Fig. 7.3.1(f)](image)

7 For the remainder of the procedure, see Section 7.4, "Storing Sequence Programs in the PMC (During Connection with the PMC)."
♦ <I/O by “I/O” key operation>

2 Select <I/O by “I/O” key operation>, and then click the <Next> button. The [Program transfer wizard Selection of loading/store] screen appears.

3 Click the <Next> button. The [Program transfer wizard Selection of program] screen appears.

4 Select LADDER or ALL, then click the <Next> button.
5 The [Program transfer wizard  Setting of communication] screen appears. Set a communication protocol, and then click the <Next> button.

Fig. 7.3.1(i)

6 The [Program transfer wizard  Confirmation of processing] screen appears.

Fig. 7.3.1(j)
7 Click the <Finish> button. The [Execution of I/O transfer] screen appears.

Fig. 7.3.1(k)

NOTE
Set CHANNEL, DEVICE, FUNCTION, and DATA KIND on the PMC I/O PROGRAM screen of the PMC in advance. Set HOST for DEVICE. For details of these settings, refer to the FANUC PMC Ladder Language Programming Manual (B-61863E). Press soft key <EXEC> of the NC to place the NC in the standby status.

8 Once I/O transfer is complete, the following message appears.

Fig. 7.3.1(l)
7.4 STORING SEQUENCE PROGRAMS IN THE PMC (DURING CONNECTION WITH THE PMC)

7.4.1 Procedure

1 Select [Tool] - [Store to PMC]
   The [Program transfer wizard] screen appears.

   ![Program transfer wizard](image)

   **Fig. 7.4.1(a)**

   **NOTE**
   When connection is not established, the [Communication] screen appears. Then establish connection.

1-1 Set data.

   **Content of transfer**
   As transfer information, a selection can be made from Ladders, Language program, and PMC Parameter.
   When transferring PMC parameters, enter a transfer source file name in [Selection of]. The initial setting specifies that PMC_PRM.PRM in a user file folder is transferred.
   For a user file folder, see Subsection 3.1.3, "Work Folders and Online Program Files."
   An existing PMC parameter file can be stored in a user file folder by using the import function.
   For the import function, see Section 3.14, "IMPORTING PROGRAMS."
1-2 Click the <Next> button. The [Program transfer wizard Confirmation of processing] screen appears.

Fig. 7.4.1(b)

1-3 Check the setting items. Click the <Finish> button. Then, the [Transfer monitor] screen appears, and then the program is transferred.

Fig. 7.4.1(c)

NOTE
1 During ladder editing in online mode, no program can be stored in the PMC. Store programs in the PMC while a ladder is being monitored.
2 After storing a program in the PMC, if the CNC is powered down without backing up the program, the editing results are lost. When you want to store a program in the CNC, execute [Backup].
7.5 WRITING SEQUENCE PROGRAMS INTO F-ROM

This section describes how to back up a program edited in online mode or a program stored in the PMC to F-ROM of the CNC.

7.5.1 Procedure

1. Select [Tool] - [Backup].
   The [Backup of program] screen appears.
   
   ![Backup of program screen](image)

   **Fig. 7.5.1**

2. To back up a program, click the <OK> button.
   When backup is completed successfully, the [Backup of the program ended] message appears.
   To cancel the backup of a program, click the <Cancel> button.
This chapter describes how to execute and stop sequence programs.

**WARNING**
Special care is needed when you execute or stop a program.
If a program is used inappropriately, the machine may operate in an unexpected manner.
It is recommended that you not use this machine while a person is near the machine.

- How to check the execution or stop status
  Check the execution or stop status on the status bar.

![Execution/stop status](image)

Undisplay: When disconnected

- Execution status
- Stop status

Fig. 8(a)
8. EXECUTING AND STOPPING SEQUENCE PROGRAMS

- Preparation prior to accessing the PMC

Procedure

1. Connect a personal computer to the NC (PMC) with a cable.
   (For the specification of the required cable, see Appendix 1.)
2. Check the communications status (connection or disconnection) with the PMC.

   ![Connection/disconnection status](image)

   - [Symbol]: Disconnection status
   - [Symbol]: Connection status

   Fig. 8(b)

4. Click the <Connect> button to establish a connection.
8.1 EXECUTING SEQUENCE PROGRAMS

This section describes the procedure for executing a sequence program.

Procedure

1. Select [Tool] - [Program Run/Stop].

For no language program:

![Fig. 8.1(a)](image)

Yes

A sequence program is to be executed.

No

The dialog box is closed without executing a sequence program.

For a language program:

![Fig. 8.1(b)](image)

Yes

For a language program:

Fig. 8.1(b)

INITIAL START

Selected: A language program is to be executed from the beginning.

Unselected: A language program is to be executed from the last-terminated position.
8.2 STOPPING SEQUENCE PROGRAMS

This section describes the procedure for stopping sequence programs.

Procedure

1. Select [Tool] - [Program Run/Stop].

![Program RUN/STOP](image)

<table>
<thead>
<tr>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

- **Yes**
  - A sequence program is to be stopped.

- **No**
  - The dialog box is to be closed without stopping the sequence program.

**NOTE**

When the PMC-MDI screen is displayed by a language program on the NC, no program can be stopped. To stop the program, select another screen on the NC.
9 DIAGNOSIS

This chapter describes the online diagnosis functions including ladder monitoring, display and modification of the PMC status and PMC parameters, signal tracing, and signal analysis.
9.1 LADDER MONITORING

**CAUTION**
1 The online monitor function for step sequence programs is not supported.
2 If the system being used is not supported by the connected PMC, the online functions sometimes cannot be used. Use a system with a supported edition.

**9.1.1 Procedure**

1 When the system is in offline mode, select [Ladder] - [Online/Offline] to set online mode. When the <On-Line/Off-Line Change> button is in the up state, the system is in offline mode. When the button is in the down state, the system is in online mode.

![On-Line/Off-Line Change button]

9.1.2 [Monitor] Screen

The screen is scrolled by using the direction keys, page keys, and scroll bars.
The signal ON and OFF states are expressed by the line thickness.

ON:  
OFF:  

Fig. 9.1.2
9.1.3 [Edit] Screen

The <Update> button on the toolbar writes the edited ladder program to the PMC.
The <Restore> button restores the ladder program to its original state that existed before editing.

CAUTION
Executing the update function alters the ladder program on the PMC.
Before executing the update function, carefully check whether it is safe to alter the ladder program.

For other edit operations, see Section 3.3, "EDITING LADDER DIAGRAMS."
9.1.4 Signal Trigger Stop Function

9.1.4.1 Procedure

1. Choose [Open Program] from the [File] menu to open a program to be monitored.

2. If the offline mode is set, choose [Online/Offline] from the [Ladder] menu to set the online mode. The offline mode is set when the <Online/Offline Switch> button is up. The online mode is set when the button is down.

3. Choose [Ladder Mode - Signal Trigger] from the [Ladder] menu. The <Signal Trigger> button is held down, and the [Signal Trigger] screen appears. At the bottom of the screen, Trigger Mode, Check Point, Address, Count, and Time are displayed. (See Subsection 9.1.4.4, "[Trigger Parameter] screen."

![Fig. 9.1.4.1](image-url)
9.1.4.2 Executing the signal trigger stop function

1. Choose [Signal Trigger - Start] from the [Ladder] menu. The [Signal Trigger Stop Function] execution screen appears. During execution, the status bar of the main frame displays an icon indicating that the signal trigger stop function is being executed.

![Screen shot of the signal trigger stop function execution](image)

**Fig. 9.1.4.2**

<Icon for indicating that the signal trigger stop function is being executed>
9.1.4.3 Terminating the signal trigger stop function

1. When the signal trigger stop condition is satisfied, the [Signal Trigger] screen appears, and sample data is collected.

   ![Signal Trigger Screen](image)

   Fig. 9.1.4.3(a)

2. The [Signal Trigger Stop Function] termination screen appears. Trigger stop time on the NC side is displayed.

   ![Trigger Stop Function Screen](image)

   Fig. 9.1.4.3(b)
9.1.4.4 [Trigger Parameter] screen

**Address**
Set a trigger address. (Symbol input is possible.)

**Check Point**
Select a trigger check point.
Make a selection from Level1 (start of LEVEL1), END1 (after END1 instruction execution), END2 (after END2 instruction execution), and END3 (after END3 instruction execution, selectable with a model that can use LEVEL3).

**Count**
Set a trigger count (1 to 65535).

**Trigger Mode**
ON: Stops triggering on the rising edge of a specified address signal.
OFF: Stops triggering on the falling edge of a specified address signal.

**<Init> button**
This button initializes the parameters as follows:
Address: Blank
Check Point: LEVEL1
Count: 1
Trigger Mode: Disabled

9.2 SIGNAL STATUS

The PMC signal status can be displayed and changed in real-time.

**WARNING**
Special care must be taken when the signal status or PMC parameters are changed. If the change function is not used appropriately, the machine operation may be unpredictable. When there are people near the machine, this function should not be used.

**CAUTION**
The statuses of some signals cannot be changed. The status of such a signal is not changed when a sequence program, the CNC, the MMC, or an external I/O unit such as the I/O-Link is repeatedly writing data into the address of the signal. (The CNC repeatedly writes data to address F, the MMC repeatedly writes data to address M, and the external I/O unit repeatedly writes data to address X.)

9.3 PMC PARAMETERS

PMC parameters (timers, counters, keep relays, and data table) are displayed.

**WARNING**
Special care must be taken when the signal status or PMC parameters are changed. If the change function is not used appropriately, the machine operation may be unpredictable. When there are people near the machine, this function should not be used.

**CAUTION**
When PMC parameters should not be changed, the parameters may be protected. Refer to the relevant programming manual for the PMC being used.

9.3.1 Procedure

1. Select [Diagnose] - [PMC Parameter].

2. Display the pull-down menu, and then select [Timer], [Counter], [Keep Relay], [Data Table], or [Set Up].
9.3.2 Timer

The contents of the timer address locations (T) used with the TMR instruction can be displayed and modified.

9.3.4.4 Data for PMC control software

Because some keep relays are used by the PMC control software, sequence programs cannot use the data in these keep relays. This subsection describes only the signals relating to online function operations. For detailed information and other signals, refer to the "PMC Ladder Language Programming Manual" (B-61863E).
The bits marked * are used by the PMC control software and are not related to the online function operations.

9.3.6 Setting PMC Setting Parameters

PMC setting parameters can be made valid or invalid.

9.3.6.1 Procedure

1. Select the setting parameters you want to make valid.

![Setting Parameters Menu](image)

Fig. 9.3.6.1

2. To set your selections, click the <OK> button. To cancel your selections, click the <Cancel> button.

9.3.6.2 Setting items

- Programmer enable
- Manual execution of sequence programs
- Enable memory write
- Automatic execution of the signal trace function (at power-on)
- Automatic execution of the signal analysis function (at power-on)
- Disable change in data table control information
- Automatic execution of the signal trigger function (at power-on)
- Automatic ladder transfer (at end of online editing)
- Automatic write to F-ROM (at end of online editing)
9.4 PMC ALARM STATUS

PMC alarm messages are displayed.

9.4.1 Procedure

1. Select [Diagnose] - [PMC Alarm Status].
   The [PMC Alarm Status] screen appears.

Fig. 9.4.1

For details on PMC alarm messages, refer to the ladder language programming manual.
9.5 PMC STATUS

The PMC program status is displayed.

9.5.1 Procedure

1. Select [Diagnose] - [PMC Status].
   The [PMC Status] screen appears.

  Minimum scan time
9.6 SIGNAL TRACING

Changes in arbitrary signals are displayed on the screen. Signals are traced one or two bytes at a time. For one-byte tracing, two addresses can be traced at the same time. Up to 512 items can be displayed for one-byte tracing. For two-byte tracing, up to 256 items can be displayed.

9.6.1 Procedure

2. Click the <Parameter> button. The [Signal Trace Parameter] screen appears.

4. Click the <Start/Stop> button. The <Start/Stop> button enters the down state, and signal tracing starts.
5 To terminate tracing, click the <Start/Stop> button again. The <Start/Stop> button then enters the up state, and signal tracing terminates.

- Signal status indication
  - The signal is off.
  - The signal is on.

- Mask bit name indication
  The numbers of the bits to be detected are indicated with bold characters.
  The numbers of the bits not to be detected are indicated with grayed characters.
  Example: When the signals on bits 4 to 7 are detected, and bits 0 to 3 are masked
  R9028
  7 6 5 4 3 2 1 0

</tr>
</tbody>
</table>
9.6.6 [Signal Trace Parameter] Screen

Mode
Signal data length (in bytes)

Address Type
○ 1 b address or physical address

Address
Address for signal tracing of a specified address type

Mask Bit
Specify the bits of the signals that need not be traced. (The buttons of the signals to be traced are in the down state.)

The parameter settings become valid when the execution of signal tracing is selected.

NOTE
1 While the signal analysis function is being used, the signal trace function cannot be used.
2 During online monitoring, the PMC signal trace screen cannot be displayed.
9.6.7 Automatic Trace Function at Power-On

If trace parameters are set, and [Signal Trace Start] is selected on the [Set Up] screen for PMC parameters, tracing will start automatically when the power to the CNC is turned on.

CAUTION
When the address type is physical address, starting tracing with an illegal memory address specified may result in a system error. To specify a valid physical address, the user needs to be familiar with PMC programming in C. Refer to the "C Programming Manual" (B-61863E-1), and specify a valid memory address.
The ladder signal status is sampled and displayed along with the time axis. Trigger conditions can also be set.

### 9.7.1 Procedure

![Signal Analysis Screen](image)

2. Click the <Parameter> button. The [Signal Analysis Parameter] screen appears.

![Parameter button](image)

4. Click the <Sampling> button. The <Sampling> button then enters the down state, and sampling starts.

![Sampling button](image)

5. To terminate sampling, click the <Sampling> button again. The button enters the up state, and sampling terminates.

- Maximum number of signals sampled simultaneously: 16
- Sampling interval: 8 or 4 msec
- Maximum sampling period:
  - 10 sec (when the sampling interval is set to 8 msec)
  - 5 sec (when the sampling interval is set to 4 msec)
9.7.2 Toolbar

Fig. 9.7.2

<1> Parameter

<2> Start and stop of sampling

NOTE
1 While the signal analysis function is being executed, the signal trace function cannot be used. If the <Sampling> button is clicked during signal tracing, a message box appears, indicating "Signal Trace function is running."

2 When the automatic signal read function is executed at power-on, the displayed button is in the down state, which indicates that sampling is in progress.

<3> Open File
Reads a signal analysis data file, and then displays waveforms. The extension of signal analysis data files is SAN.

<4> Save As
Saves signal analysis data in a file with a file name specified (extension: SAN).

<5> Grid line on/off
Specifies whether to display grid lines. When no grid line is displayed, the button is in the up state; when grid lines are displayed, the button is in the down state. The color and line style of grid lines are set from the context menu which is displayed by right-clicking a displayed grid line.

<6> Symbol on/off
Sets the display format of the trigger and sampling addresses. When the symbol format is selected, the button is in the down state; when the address format is selected, the button is in the up state.

<7> Search
Moves through the signal analysis area with a specified search time.

<8> Text box for inputting the character string for which a search is to be made
Specifies the search time.

<9> Search character string increase/decrease button
Increases or decreases the search time in grid setting time units.
9.7.3 Status Bar

<table>

</tbody>
</table>
9.7.6  [Signal Analysis Parameter] Screen

**Sampling Time**
Set the maximum sampling time.
When the sampling interval is 8 msec, set one to 10 sec (in 0.1-sec increments).
When the sampling interval is 4 msec, set one to five sec (in 0.1-sec increments).

**Trigger Address**
Set the trigger bit address at which sampling starts, with a PMC address or symbol.

**Condition**
Condition for starting sampling
Start: Sampling start button on the toolbar
Trigger-ON: Sampling start button + rising edge at the trigger address
Trigger-OFF: Sampling start button + falling edge at the trigger address

**NOTE**
When Trigger-ON or Trigger-OFF is selected with no trigger address set, a message box appears, indicating "No Trigger Address."
Trigger Mode

There is a buffer for holding data sampled for up to 10 seconds when the signal status is read at 8-msec intervals. (When the signal status is read at 4-ms intervals, the buffer can hold data sampled over five seconds.)

In trigger mode, the read start and end points are specified.
After: The signal status after the trigger address meets the trigger condition is read until the sampling time elapses.
About: The signal status around the time at which the trigger address satisfies the trigger condition is read within the sampling time.
Before: The signal status from when the <Sampling> button on the tool bar is pressed until the trigger address satisfies the trigger condition is read for up to the sampling time.
Only: The signal status when the trigger address satisfies the trigger condition is read.

NOTE

When About or Before is selected with the condition set to Start, a message box appears, indicating "[About]/[Before] is illegal on [Start] selected."

Signal Address

Set up to 16 sampling addresses with PMC addresses or symbols.

To reset the settings to the default values, click the <RESET> button.

<table>
<thead>
<tr>

9.7.9 Automatic Signal Sampling Function at Power-On

If sampling parameters are set, then [Signal Analysis Start] is checked on the [Set Up] screen for PMC parameters, sampling will start automatically when the power to the CNC is turned on.
9.8 CLEARING PMC AREAS

Addresses G, Y, N, A, R, and S can be cleared.

9.8.1 Procedure

1. Select [Tool] - [Clear PMC Memory].
   The [Clear PMC memory] screen appears.

   ![Clear PMC memory screen](image)

   **Fig. 9.8.1**

2. To clear the PMC area, click the <OK> button.
   To cancel the clear operation, click the <Cancel> button.

   **WARNING**
   When PMC areas are cleared, special care must be taken.
   Clearing a PMC area may cause unpredictable machine operation. When there are people near the machine, this function should not be used.
9.9 ACTIVATING THE I/O LINK

9.9.1 Procedure

1. Select the [Tool] - [I/O Link Restart].
   The [I/O Link Restart] screen appears.

[Fig. 9.9.1]

2. To activate the I/O Link, click the <OK> button.
   To cancel the activation of the I/O Link, click the <Cancel> button.

**WARNING**

When the I/O Link is activated, special care must be taken.
Setting I/O module data may cause unpredictable machine operation. When there are people near the machine, this function should not be used.
This chapter describes how to convert DOS-version FAPT LADDER-II and Ladder Editing Package(Windows) sequence programs.
10.1 CONVERTING FROM DOS-VERSION FAPT LADDER-II

This section describes how to convert DOS-version sequence programs to the Windows version.

10.1.1 Procedure

1. Select [Tool] – [Data Conversion.]

![Conversion into LAD Format File](image)

2-1 Input the required data.

- **Program Name**
  Enter the name (folder name) of the DOS-version sequence program you want to convert.

- **LAD Format File**
  Enter the name of the Windows-version sequence program you want to create by the conversion. Use the extension .LAD. You can omit the extension, however.

3. To convert, click the <OK> button.
To abandon the conversion, click the <Cancel> button.
If an LAD file opened by another user is specified, the following error messages are displayed, and data conversion is terminated:

Fig. 10.1.1(b)

If an LAD file that has the read-only attribute is specified, the following error messages are displayed, and data conversion is terminated:

Fig. 10.1.1(c)

Fig. 10.1.1(d)

Fig. 10.1.1(e)
10.2 CONVERTING TO DOS-VERSION FAPT LADDER-II

This section describes how to convert Windows-version sequence programs to the DOS version.

10.2.1 Procedure

1. Select [Tool] – [Data Conversion.]

   ![Conversion into Program Data File](image)

   **Fig. 10.2.1**

2-1 Input the required data.

   **LAD Format File**
   
   Enter the name of the Windows-version sequence program you want to convert. Use the extension .LAD. You can omit the extension, however.

   **Program Name**
   
   Enter the name (folder name) of the DOS-version sequence program you want to create by the conversion.

   **Program Format**
   
   Select format A, B, or C.

3. To convert, click the <OK> button.
   To abandon the conversion, click the <Cancel> button.
10.3 CONVERTING SEQUENCE PROGRAMS BETWEEN PMC MODELS

Converting a mnemonic file enables it to be used as a sequence program for another PMC model.

10.3.1 Conversion by Changing System Parameters

For the following PMC models, changing the system parameters in a mnemonic file enables a sequence program for another PMC to be edited. However, the format of the system parameters, the function instructions that can be used, and the range of addresses vary from one PMC model to another.

<table>
<thead>
<tr>
<th>CNC model</th>
<th>PMC from which conversion is possible</th>
</tr>
</thead>
<tbody>
<tr>
<td>FS16/18/21-C</td>
<td></td>
</tr>
<tr>
<td>FS16/18/21i-A</td>
<td></td>
</tr>
<tr>
<td>Power Mate-D/F/H</td>
<td>PMC – PA1 / PA3 / SB6</td>
</tr>
<tr>
<td>Power Mate i-D/H</td>
<td></td>
</tr>
<tr>
<td>FS15-B</td>
<td>PMC – NB / NB2 / NB6</td>
</tr>
<tr>
<td>FS15i</td>
<td></td>
</tr>
</tbody>
</table>

**NOTE**

It is impossible to convert step sequence data.
Example of conversion (PMC-SB3 → PMC-SC3)

1. To convert a source program to mnemonic file format, set the PMC model to PMC-SB3.
2. Using a text editor, change the setting of system parameters so that they match the PMC-SC3.
3. For FAPT LADDER-II, set the PMC model to PMC-SC3 to convert the mnemonic file manipulated in step 2 to a source program.

```
Mnemonic file to be converted
(PMC-SB3)

@A

```

Changing system parameters
10.3.2 Using System Program Data for Another Program

The following method makes the data (title, symbols, comments, ladders, messages, and I/O module data) of a sequence program usable as data for another sequence program.

However, the range of addresses varies from one model to another. Refer to the applicable programming manual for each individual model for a detailed explanation about how to change the range of their addresses.

[Example: Making symbol and comment data for the PMC-SB usable for with PMC-SC3]

```
%@A
%@0
2 BCD
3 NO
4 PMC-RB
7 100

...
%
%@E
```
10.3.3 Converting Step Sequence Programs between Different Models

Usually, a mnemonic file is used for ladder program conversion between different models. For step sequence programs, however, a memory card format file is used for conversion.

Program conversion is possible between the following combinations of models.
"PMC-SB4 (STEP SEQ) → PMC-SC4 (STEP SEQ)"
"PMC-SB4 (STEP SEQ) → PMC-SB6 (STEP SEQ)"

Example of conversion (PMC-SB4 (STEP SEQ) → PMC-SB6 (STEP SEQ))

1 Compile a step sequence program for the PMC-SB4 (STEP SEQ) to create memory card format data.

2 Export memory card format data.

3 Create a new program.
   (Set the model to "PMC-SB6 (STEP SEQ)."

4 Import the memory card format data that was exported in step 2, above.

5 Select [Tool] - [Decompile] to decompile the program.

This completes the conversion. When the step sequence program is loaded into FAPT LADDER-II, it can be used for the PMC-SB6 (STEP SEQ).
This chapter describes the error messages that may be displayed by Ladder Editing Package(Windows).
11.1  ERROR MESSAGE FORMAT

Ladder Editing Package (Windows) outputs error messages in the following format:
Function symbol:Classification-Four-digit-code  Error message character strings

11.1.1  Function Symbols

The function for which an error occurred is represented using one alphabetic character.

<table>
<thead>
<tr>
<th>Function symbol</th>

APPENDIX
When data is transferred from the personal computer (PC) to the CNC, the cable shown below is used.

![Cable Diagram]

**CABLE FOR DATA TRANSFER**

A02B-0200-K814
CONVERSION USING A SIGNAL ADDRESS CONVERTER

Table B

<table>
<thead>
<tr>
<th>Converter file name</th>
<th>Applicable function</th>
<th>Reference document</th>
</tr>
</thead>
<tbody>
<tr>
<td>PM-C_CNV.SYM</td>
<td>PMC-P (Power Mate-MODEL C) -&gt; PMC-PA3 (Power Mate-MODEL D/F/H)</td>
<td></td>
</tr>
</tbody>
</table>

The converter files are stored in the subdirectory \APPENDIX of the system floppy (Vol. 5).

**Example of operation: PMC-P -> PMC-PA3**

1. By using FAPT LADDER, convert a program of the PMC-P model (conversion source) to a mnemonic file. (A in the figure below)
2. By using FAPT LADDER-III, create a program of the PMC-PA3 model (conversion destination).
3. Convert the program of <2> to mnemonics. (B in the figure below)
4. Start a text editor commercially available, then open the mnemonic file (conversion destination) created in <3>.
5. Replace the symbol data of the mnemonic file (conversion destination) with the converter file. (C in the figure below)
6. Replace the ladder data of the mnemonic file (conversion destination) with the ladder data of the mnemonic file (conversion source) created in <1>. (D in the figure below)
7. Close the mnemonic file (conversion destination) on the text editor.
8. By using FAPT LADDER-III, convert the mnemonic file (conversion destination) of <7> to a source program (with the program created in <2> left open).
9. Delete all symbol comment data.
